INTRODUCTION

Three words can be used to describe the Hampton Roads economy: intricate, vibrant, and unique. The local economy is influenced by a seemingly infinite number of variables that are constantly pushing and pulling in every direction. The diverse grouping of market pressures can make it difficult to understand how changes to the financial environment might impact on Hampton Roads. Unfortunately there is no crystal ball that will allow us to peer inside our economy, however, we do have access to information that we can exploit so that we are more informed when making important decisions. The goal of this benchmarking study is to inform the leadership on trends and conditions in the Hampton Roads region. This report has been designed to capitalize on available information by collecting timely, relevant, and reliable data and presenting it in a simple and convenient manner.

The first step towards achieving this goal was to develop a list of guidelines for selecting appropriate indicators. Information age technologies have enabled us to collect and publish an ever-increasing amount of data. With the wide range of available facts and figures, we now must look towards the reliability of data sources and the relevancy of the figures that are produced. Data used throughout this report was screened for accuracy, ensuring that it came from a reliable source, and was comparable from year to year.

Indicators that we included in this benchmarking report fit under five general categories. The first and largest category is the economy. This section includes employment, income, and industry benchmarks. The second section focuses on demographics in the region. The third section reviews the housing industry in Hampton Roads. The fourth section outlines the state of regional transportation. The final section contains a myriad of miscellaneous quality of life indicators. By combining all five sections we hope to provide a comprehensive view of the socio-economic climate in Hampton Roads.

The format of this report includes both static and dynamic statistics. Graphs that depict a single point in time provide a snapshot of current or recent conditions. By contrast, dynamic statistics are employed to evaluate data over time, exhibiting recent trends or patterns. In order to emphasize certain cycles (as opposed to trends), some graphics do not have a zero - origin axis.

THE ECONOMY

DEMOGRAPHICS

HOUSING

TRANSPORTATION

MISCELLANEOUS

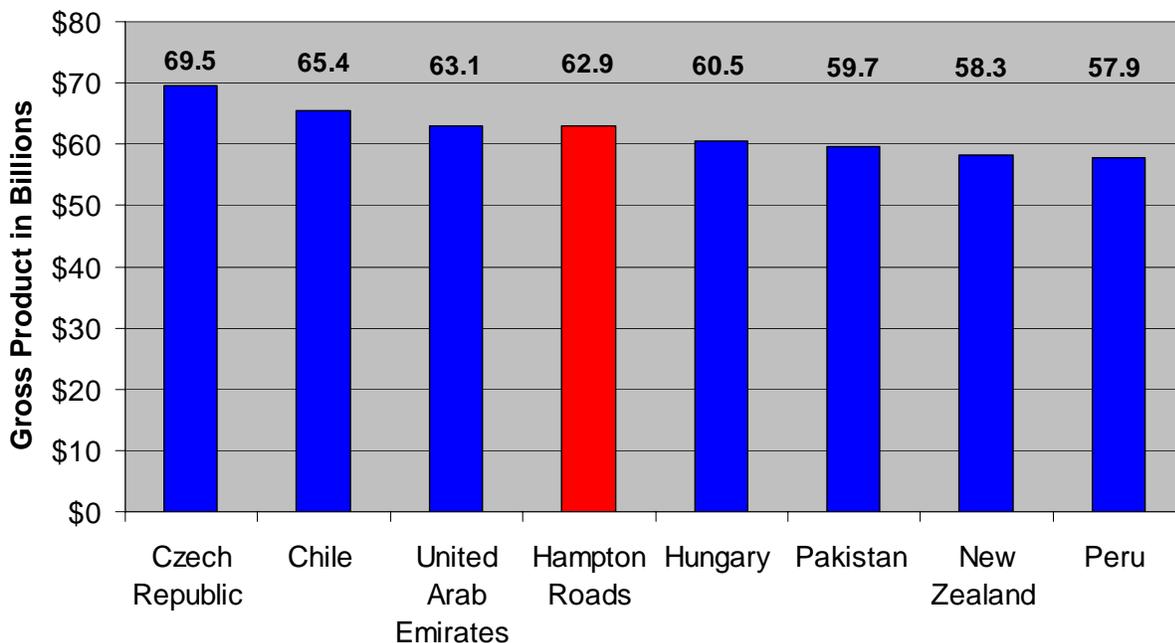

This section on the Hampton Roads economy includes a short introduction followed by statistics on gross product, employment, labor force, income, and industry.

THE ECONOMY

Broadly defined, the economy is a system or range of economic activity in a country, region, or community. It encapsulates the production, development, and management of material wealth into one single network. The Gross Domestic Product (GDP) represents our best efforts to quantify the economy into one single number. By definition the GDP is the total market value of goods and services that are produced by both workers and capital by a nation within a specified time period. By comparison, the Gross Regional Product (GRP) is the total value added in production by the labor and property located within a region, such as Hampton Roads. These measures of gross product provide us with indices that represent both the size and, in some cases, the general well being of an economy.

In 2004 Regional Economic Modeling, Inc. estimated the Hampton Roads' GRP to be approximately \$63.76 billion, roughly 0.54% of the United States GDP. When compared with the nation, the Hampton Roads' economy appears to be rather trivial. For the sake of perspective, Figure 1.1 compares the local economy to foreign economies of similar size.

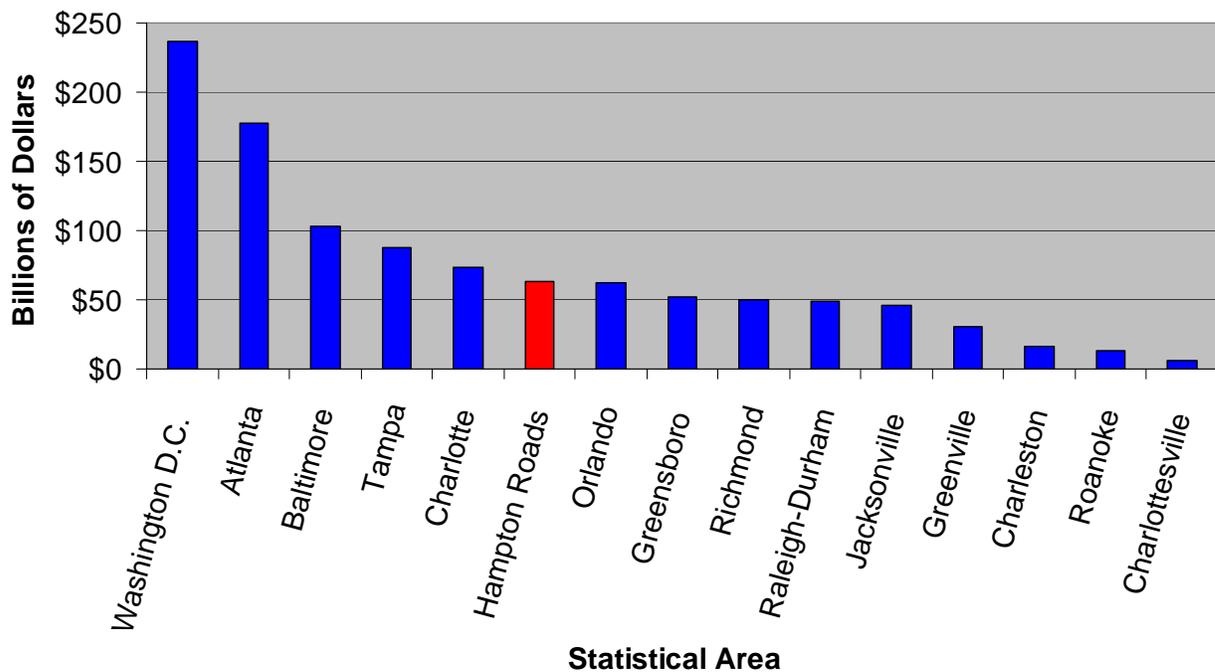

Figure 1.1 Comparable Gross Product in 2002

Source: Metro Economy Report, U.S. Conference of Mayors

The Hampton Roads community continuously competes with both foreign and domestic markets for jobs in agriculture, trade, information services, finance, technical services, and a host of other industries. The most competitive markets tend to be those in close proximity to the region and have similar comparative advantages or market structures. A standard list of competitor metropolitan statistical areas (MSAs) and combined statistical areas (CSAs) are used throughout this report. The list of competing metropolitan statistical areas is as follows: Atlanta-Sandy Springs-Marietta GA, Baltimore-Towson MD, Charleston-North Charleston SC, Charlotte-Gastonia-Concord NC-SC, Charlottesville VA, Greensboro-Winston-Salem-High Point NC, Greenville SC, Jacksonville FL, Orlando FL, Raleigh-Durham-Cary, NC, Richmond VA, Roanoke VA, Tampa-St. Petersburg-Clearwater FL, and Washington-Arlington-Alexandria, DC-VA-MD-WV. Figure 1.2 illustrates the size of the Hampton Roads economy relative to competitor statistical areas.

Figure 1.2 Gross Metro Product in 2002

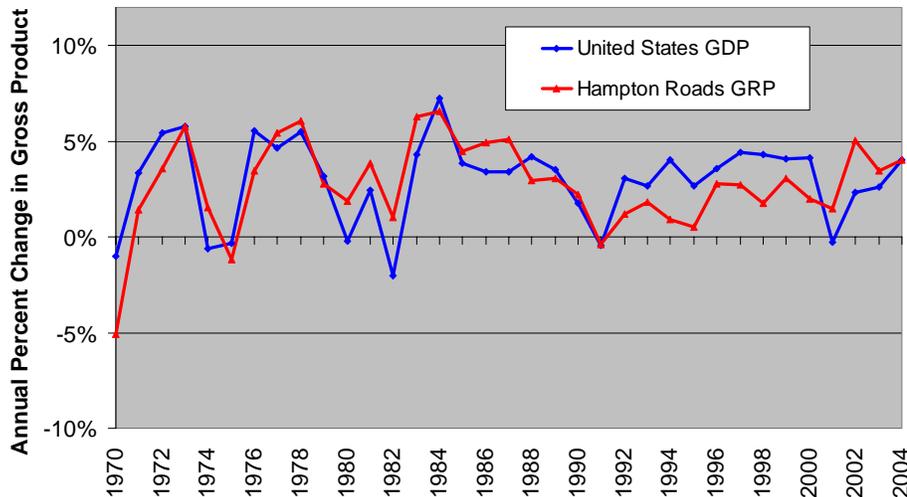

Source: Metro Economy Report, U.S. Conference of Mayors

The following section begins by comparing changes in the local economic climate to changes that have happened in reference regions. This section of the report also includes graphics on employment, labor force, income, industry, and the business climate.

1.3 NATIONAL AND REGIONAL GROSS PRODUCT

Annual Percent Change in Gross Product

Source: Regional Economic Modeling, Inc.

Why is it important:

There are a multitude of variables that influence the direction of an economy. Comparing the local gross product (GP) to the national GP provides perspective from which to view the local economy.

How are we doing:

Over the past decade HR has seen a continued annual economic growth of approximately 3.3%, in spite of a national economic down turn. It appears that the local economy has begun to move in a more independent manner in recent years.

1.4 GROSS REGIONAL PRODUCT COMPARISON FOR HAMPTON ROADS AND COMPETING METROPOLITAN AREAS FROM 1999 TO 2002

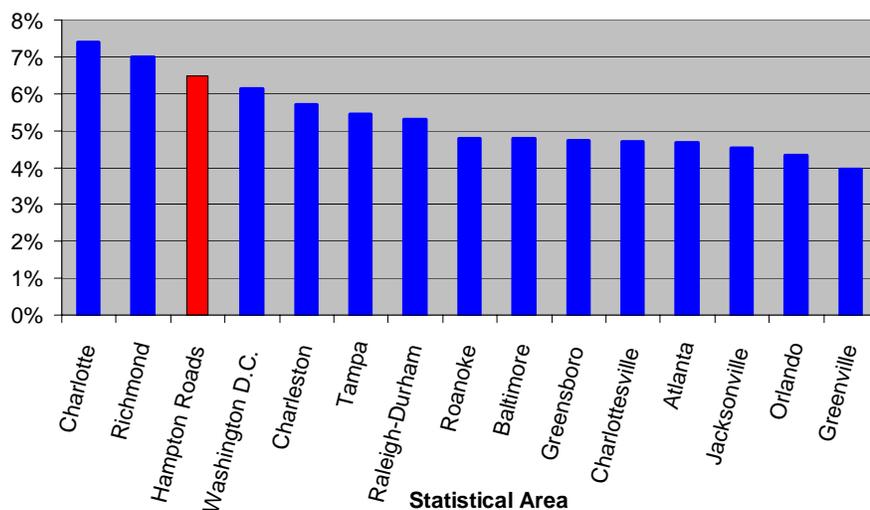

Why is it important:

Competing statistical areas are subject to many of the same factors that influence economic conditions in HR. Benchmarking local economic growth against growth in competing regions holds market conditions constant when assessing the region's performance

How are we doing:

Over the past three years HR has out performed the majority of its competitors as well as the nation. Increases in defense spending have contributed to this strong growth.

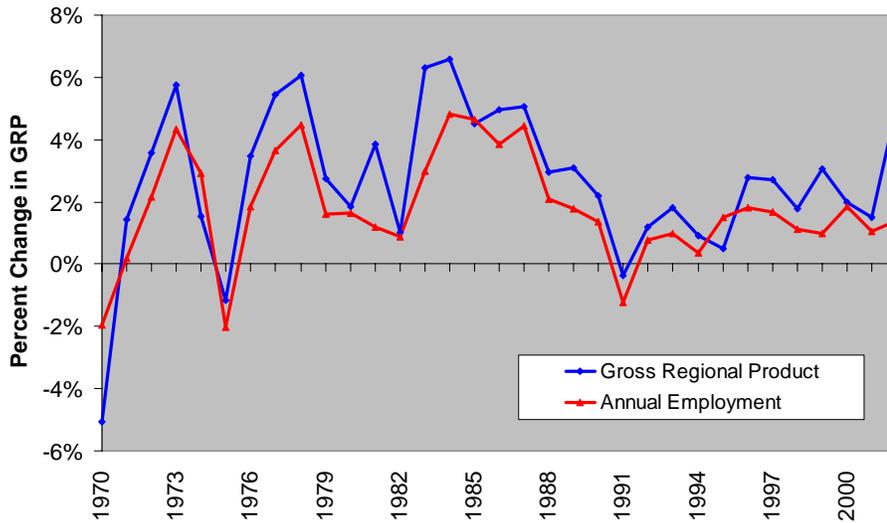

3-Year Annualized Growth Rates in GP

Source: Metro Economy Report, U.S. Conference of Mayors

1.5 EMPLOYMENT AND GROSS PRODUCT IN HAMPTON ROADS

Employment and Gross Regional Product

Sources: Regional Economic Modeling, Inc. & the Bureau of Economic Analysis

Why is it important:

Employment figures typically track gross product statistics, however, employment statistics are more readily available from a host of reliable sources. It is common practice to use employment information as a general indicator of economic well-being.

How are we doing:

Changes in HR's employment have closely tracked gross product, suggesting that local employment is closely tied to economic prosperity.

1.6 YEAR OVER YEAR CHANGE IN HAMPTON ROADS' MONTHLY EMPLOYMENT

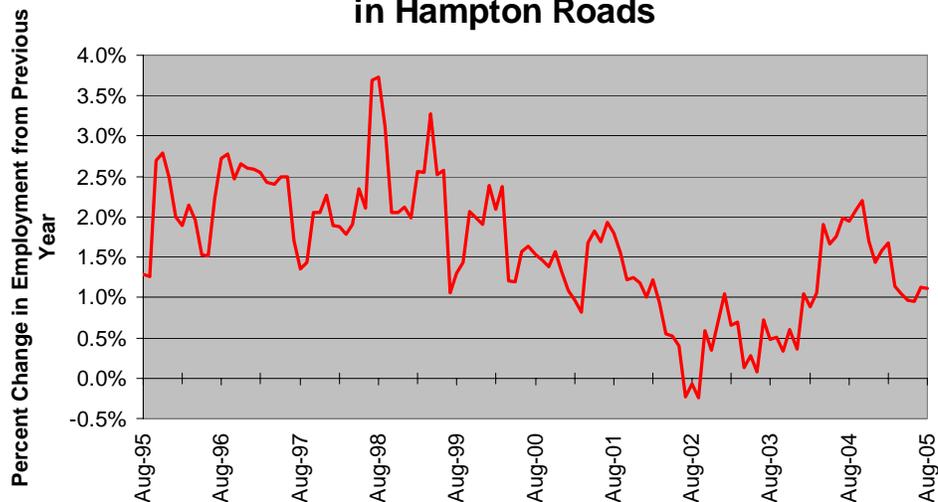

Why is it important:

Monthly data is naturally deseasonalized when compared to the same month of the previous year. This illustration removes the seasonal significance of monthly employment conditions.

How are we doing:

HR experienced strong employment growth from the latter half of the nineties through the beginning of the current decade. Employment growth slowed through 2002 and now appears to be recovering.

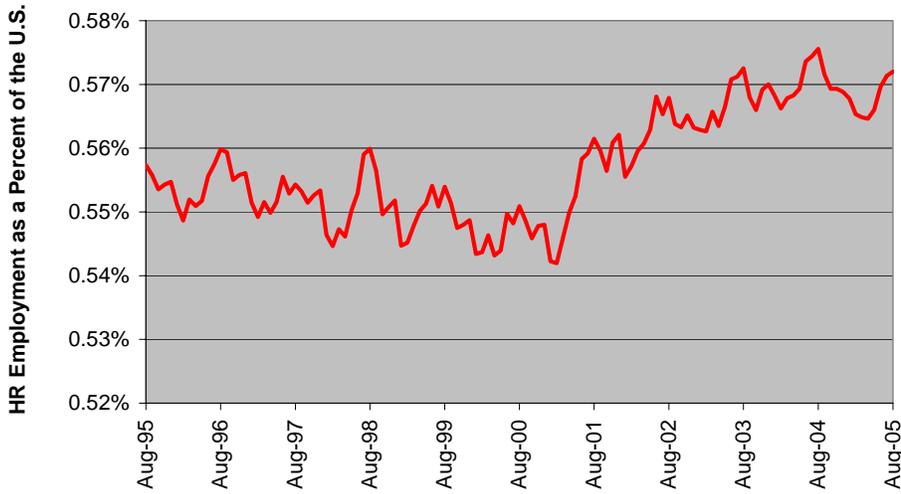

Year-Over-Year Non-Farm Employment in Hampton Roads

Source: Bureau of Labor Statistics

1.7 HAMPTON ROADS MONTHLY EMPLOYMENT AS A PERCENT OF THE UNITED STATES

Employment in HR as a Percent of the U.S.

Source: Bureau of Labor Statistics

Why is it important:

Shifts in employment are common during business cycle intervals. Comparing local employment figures to national employment figures reveals relative growth.

How are we doing:

Local employment growth has out-paced growth in national employment since mid 2001. Increased military spending helped to insulate HR from the national economic slowdown in 2001 and injected "new money" into the economy.

1.8 RECENT EMPLOYMENT GROWTH IN HAMPTON ROADS AND COMPETING STATISTICAL AREAS

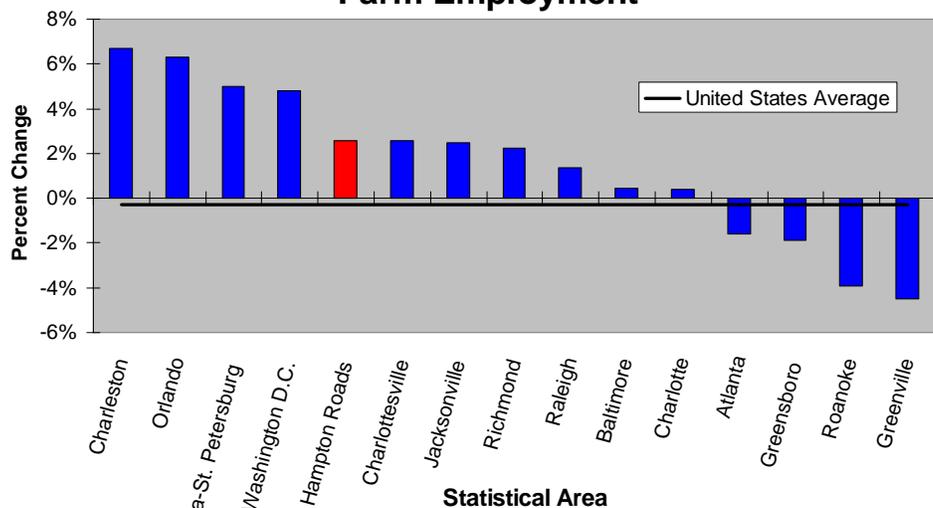

Why is it important:

This graph illustrates Hampton Roads' ability to compete with similar markets.

How are we doing:

Hampton Roads has achieved better than average employment growth over the past three years. Because of its countercyclical nature, local defense spending typically insulates the regional market, limiting aggressive growth and restricting sharp declines. Recent increases in defense spending have helped fuel economic growth.

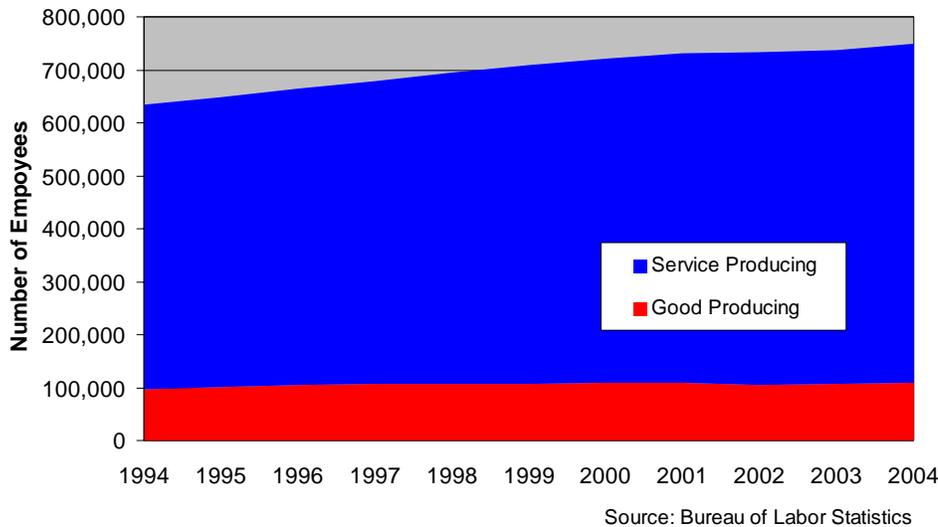

Three - Year Change in Total Non-Farm Employment

Source: Bureau of Labor Statistics

1.9 COMPARISON OF GOODS AND SERVICE EMPLOYMENT IN HAMPTON ROADS

Goods and Service Employment

Why is it important:

Historically, the goods sector has been large, playing a dominant role in the region's economy. Today, the service sector has grown more important. Services are now part of an export industry, bringing in money from outside of the region.

How are we doing:

Hampton Roads is following the national trend since the service sector has been capturing an increasing share of employment. It is important to maintain a strong base in the goods sector to ensure a diversified and flexible economy.

1.10 COMPARISON OF PUBLIC SECTOR AND PRIVATE SECTOR EMPLOYMENT IN HAMPTON ROADS

Why is it important:

Stable government employment can insulate an economy from volatile markets. Conversely, volatile government employment can exacerbate or counter market forces.

How are we doing:

Hampton Roads has historically had a large government presence due to its numerous military installations. Over the past decade, government employment has remained stable, helping to shield the local market from the national economic downturn in 2001.

Public and Private Employment

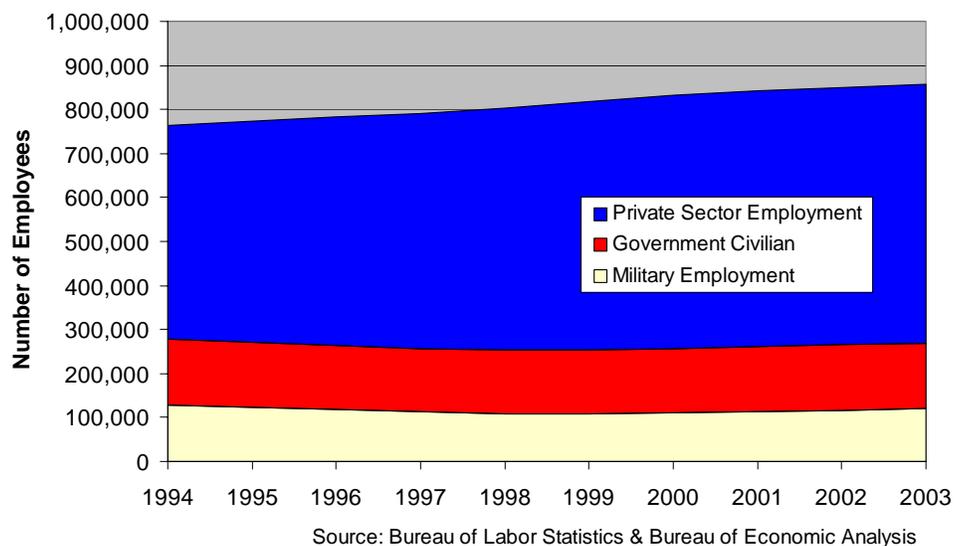

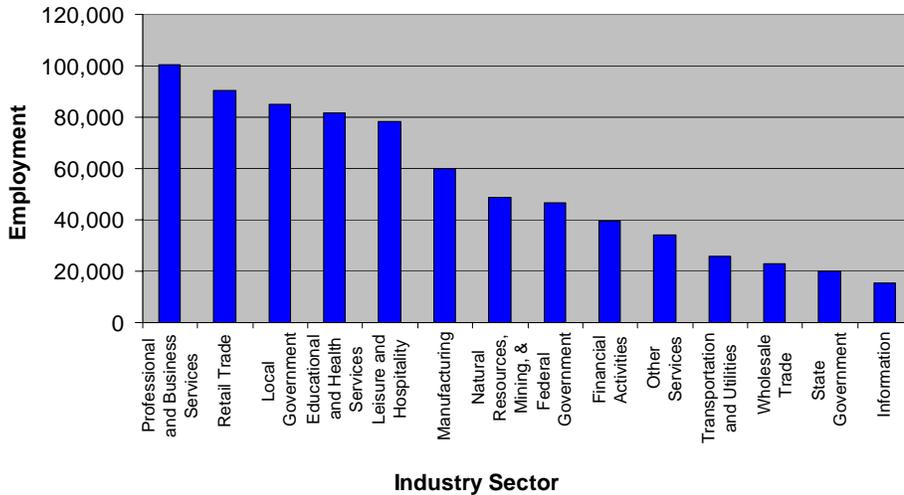

FIGURE 1.11 DISTRIBUTION OF EMPLOYMENT IN HAMPTON ROADS BY INDUSTRY SECTOR

Employment by Industrial Sector in 2004

Source: Bureau of Labor Statistics

Why is it important:

Regional economic behavior is heavily influenced by its sector composition. The current industrial make-up of a region will control future economic growth.

How are we doing:

Professional and business services, retail trade, and government employment are the three largest industrial sectors in Hampton Roads. This diverse grouping has helped to limit the volatility of the local market.

FIGURE 1.12 CHANGE IN HAMPTON ROADS EMPLOYMENT BY INDUSTRIAL SECTOR FROM 2001 TO 2004

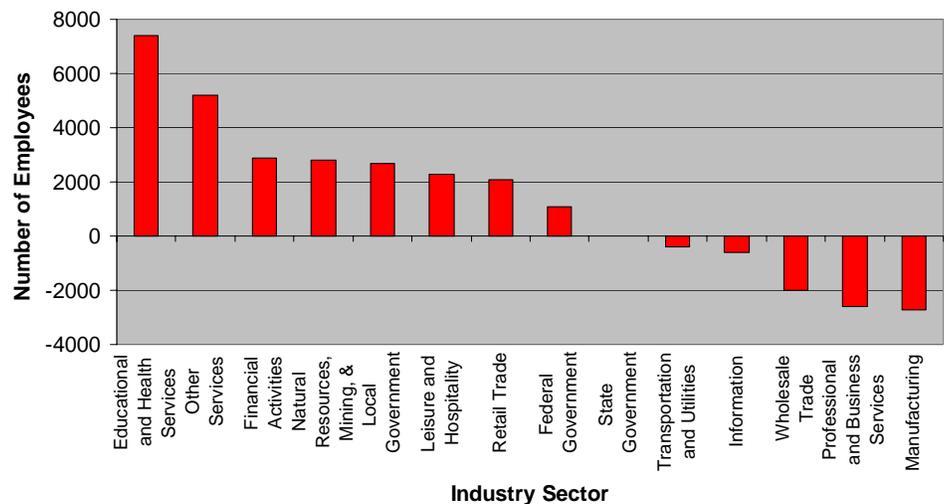

Why is it important:

Industrial employment is influenced by the business cycle. One can observe local trends by tracking changes in regional industrial employment.

How are we doing:

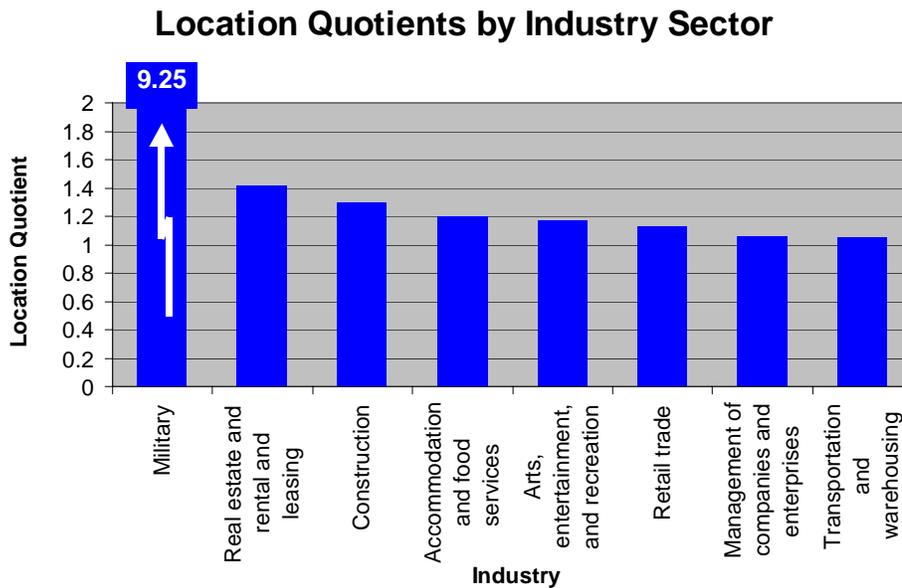

Employment in Hampton Roads largest industry sector, professional and business services, decreased by 2,600 persons. Fortunately this was more than offset by large increases in other sectors such as educational and health services.

Three - Year Change in Employment by Sector

Source: Bureau of Labor Statistics

FIGURE 1.13 HAMPTON ROADS INDUSTRIAL LOCATION QUOTIENTS IN 2004

Source: Bureau of Labor Statistics & Bureau of Economic Analysis

Why is it important:

Location quotients (LQ) identify competitive advantages by comparing regional employment distributions to national employment distributions. LQs greater than one suggest a comparative advantage.

How are we doing:

It is well known that Hampton Roads has a large military concentration, as is evident from the location quotients on the chart. Figure 1.13 also illustrates high concentrations in other industries associated with tourism, the ports, retail, and construction.

FIGURE 1.14 HAMPTON ROADS SUB-SECTOR LOCATION QUOTIENTS IN 2004

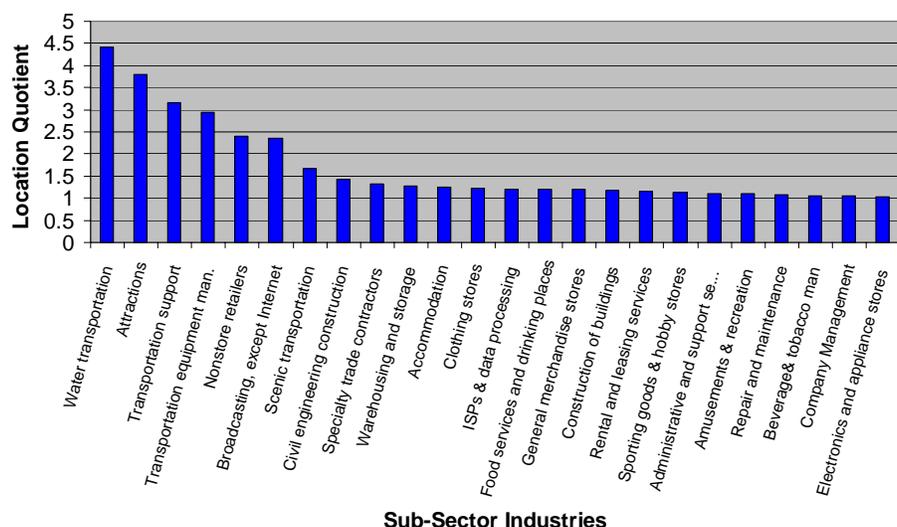

Why is it important:

Sub sector location quotients reveal specific industries that have a high regional concentration. The industries listed in Figure 1.14 all have a location quotient above 1. These sub sector industries represent the backbone of the private sector economy in Hampton Roads

How are we doing:

Water transportation, attractions, and transportation support have the three highest private sector industrial location quotients in Hampton Roads.

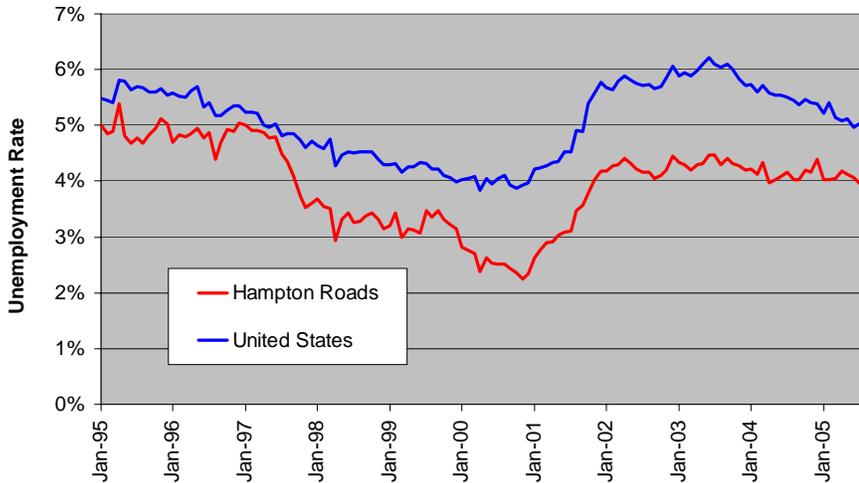

Location Quotients at the Sub-Sector Level

Source: Bureau of Labor Statistics

FIGURE 1.15 DESEASONALIZED UNEMPLOYMENT RATES IN HAMPTON ROADS AND THE UNITED STATES

National and Local Unemployment Rates

Source: Bureau of Labor Statistics

Why is it important:

Unemployment rates reflect both the general well-being of the labor force and the ability of the labor force to meet the needs of employers. Comparing deseasonalized regional monthly employment to the national rate enables one to assess the condition of the labor market over time.

How are we doing:

Hampton Roads and Virginia have historically had low unemployment rates. These low unemployment figures reflect, in part, the region's military presence.

FIGURE 1.16 EMPLOYMENT TO POPULATION RATIOS IN HAMPTON ROADS AND COMPETING METRO AREAS

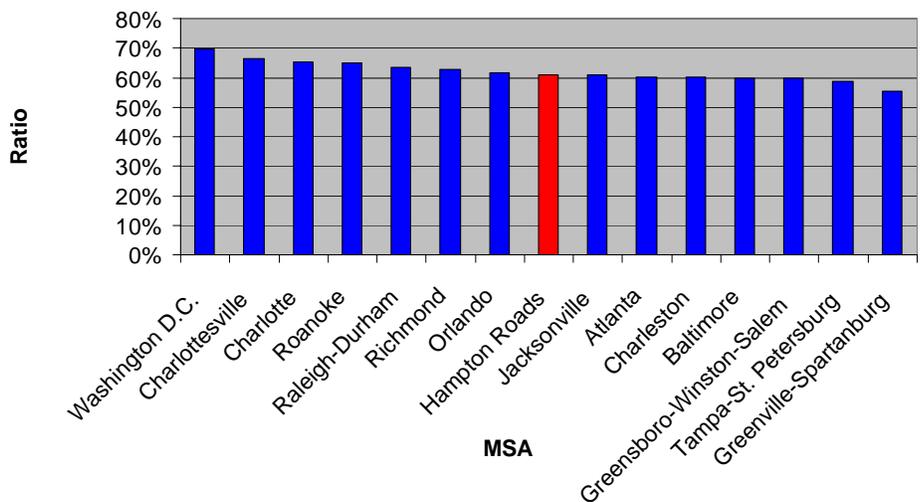

Why is it important:

Hampton Roads competes with other metro areas at a number of levels. When comparing employment and income statistics, it is important to consider the employment to population ratios. A small increase or decrease in this ratio can drastically alter other benchmarking indicators.

How are we doing:

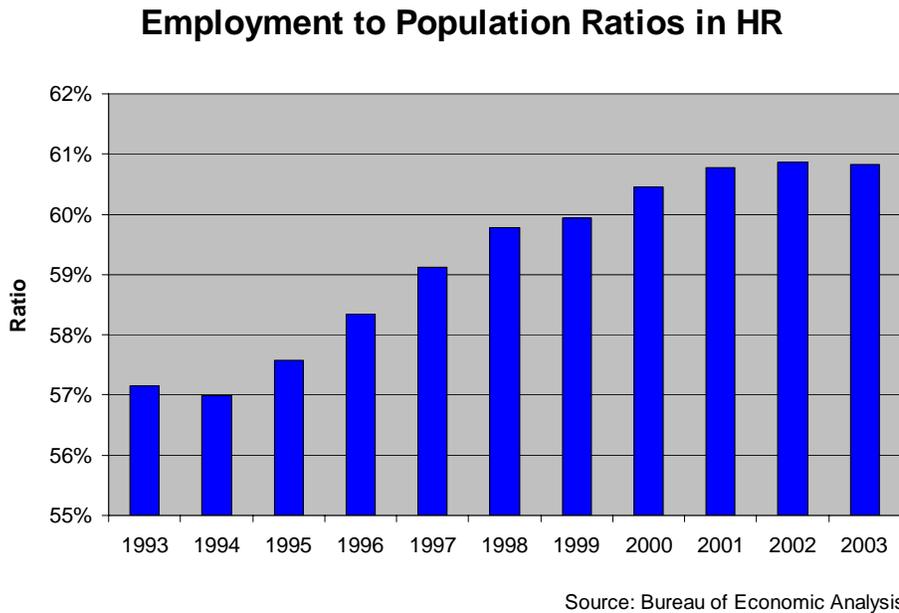

At 60.8%, Hampton Roads' employment to population ratio is near the average of reference metro areas. Washington D.C. ranks the highest with a rate of 69.7 % and Greenville the lowest with a rate of 55.4%.

Employment to Population Ratio in 2003

Source: Bureau of Economic Analysis

FIGURE 1.17 HISTORIC EMPLOYMENT TO POPULATION RATIOS IN HAMPTON ROADS

Why is it important:

Changing employment to population ratios can be the result of either economic or demographic changes. Considering changes in the employment to population ratio in combination with demographic and economic changes will result in a better understanding of the market.

How are we doing:

After increasing substantially over the past decade, Hampton Roads' employment to population ratio has plateaued. As a greater share of our labor force continues to retire, there will be increased downward pressure on the employment to population ratio.

FIGURE 1.18 PER CAPITA INCOME IN HAMPTON ROADS AND COMPETING METRO AREAS

Why is it important:

Per capita income is the most widely available statistic on economic well-being.

How are we doing:

Hampton Roads does not compare favorably with competing metro areas or the United States with respect to per capita incomes. Low wages (a component of income) can make it difficult for employers to attract talented employees, however low incomes can also make it easier for economic developers to attract businesses.

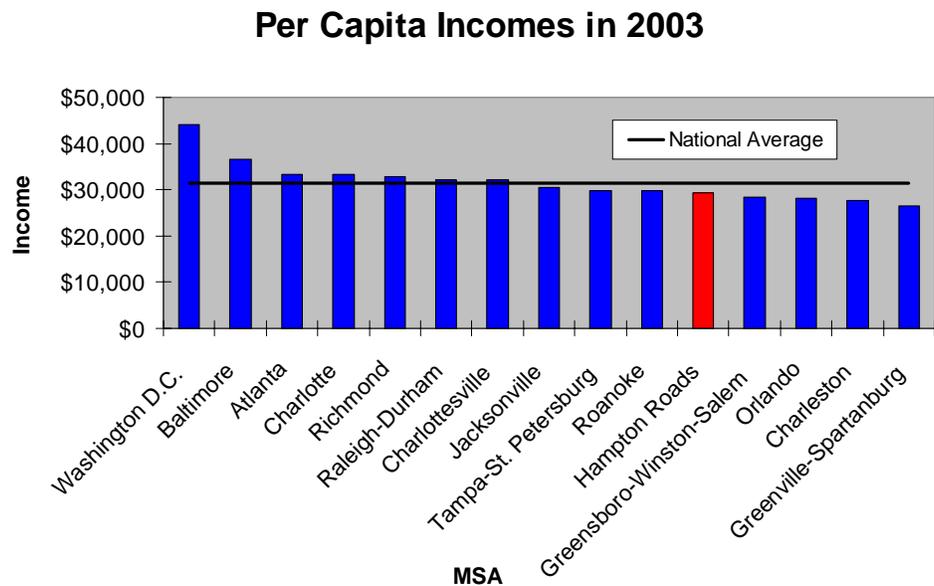

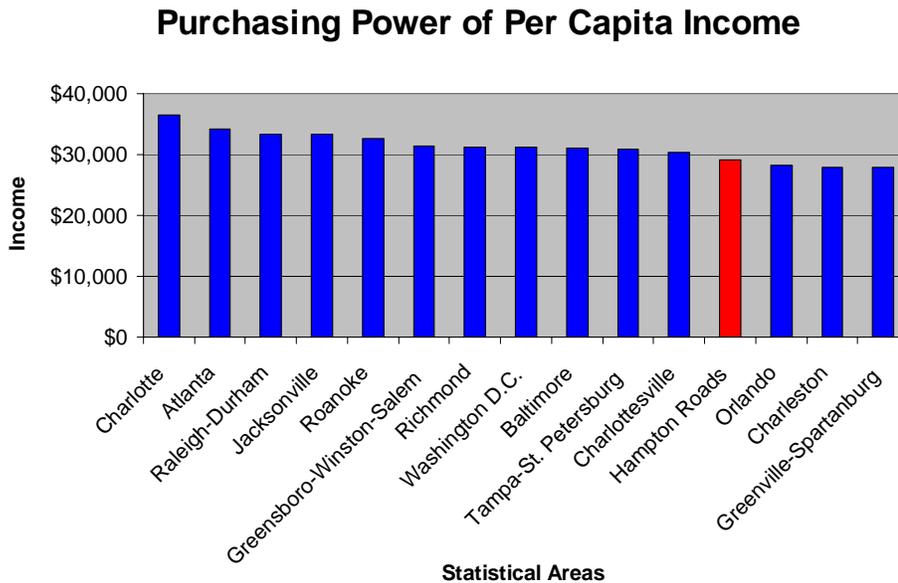

FIGURE 1.19 PURCHASING POWER OF PER CAPITA INCOME IN HAMPTON ROADS AND COMPETING METRO AREAS IN 2003

Statistical Areas

Source: Bureau of Economic Analysis and ACCRA

Why is it important:

The cost of living can vary substantially from region to region. Understanding incomes within the context of the cost of living provides a clearer picture as to real purchasing power comparisons.

How are we doing:

Regional increases in the cost of housing coupled with low incomes have diminished the purchasing power of Hampton Roads residents. When the cost of living increases at a faster rate than wages, real income decreases and residents are left with less purchasing power.

FIGURE 1.20 HAMPTON ROADS PER CAPITA INCOME IN RELATION TO THE NATIONAL AVERAGE

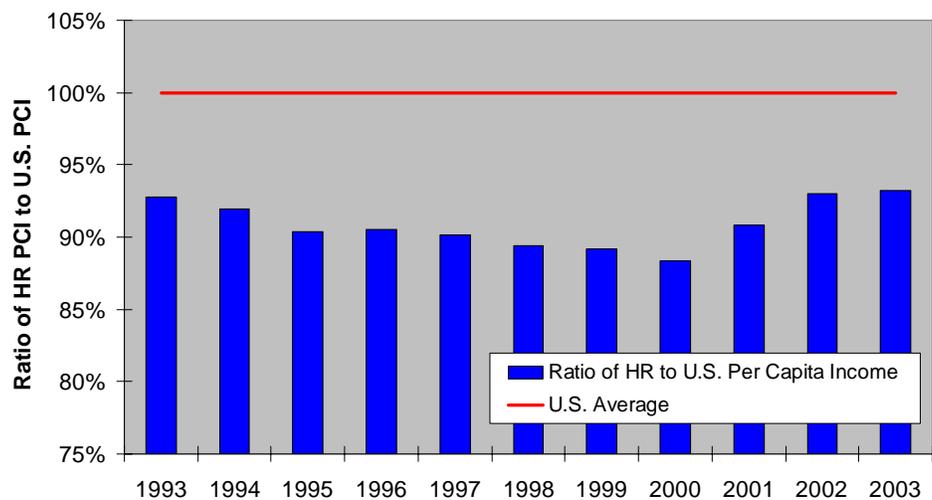

Why is it important:

Fluctuations in relative incomes reflect fluctuations in standards of living.

How are we doing:

Hampton Roads' per capita income (PCI) has historically been below the national average. Local PCI compared to the National PCI was on a downward trend from 1986 through 2000. Only recently has Hampton Roads PCI begun to rise with respect to the United States due, in part, to increases in defense spending and an increasing employment to population ratio.

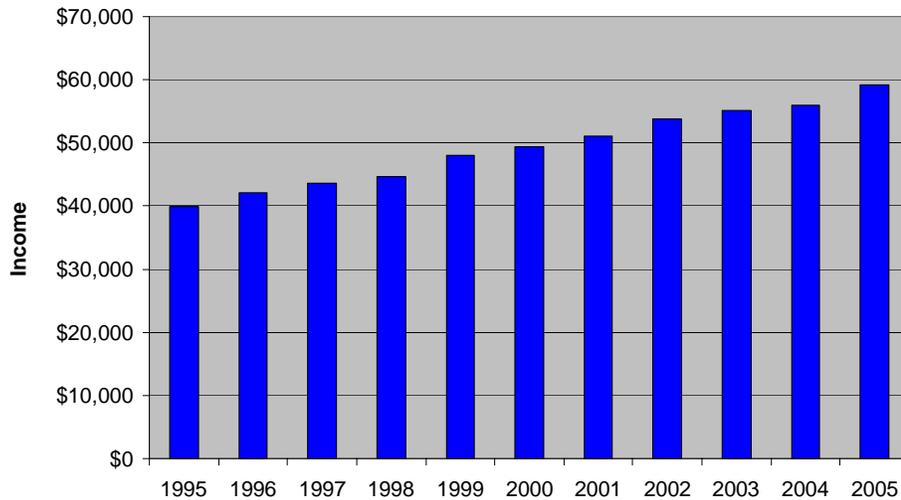

Relative Per Capita Income

Source: Bureau of Economic Analysis

FIGURE 1.21 MEDIAN FAMILY INCOME

Hampton Roads Median Family Income

Source: U.S. Department of Housing and Urban Development

Why is it important:

The median family income represents the general financial wellbeing of regional households. Households are the fundamental purchasing unit for many products and services.

How are we doing:

Median family incomes in Hampton Roads have realized strong growth over the past decade, suggesting that income growth has not been restricted to the wealthy class.

FIGURE 1.22 EARNINGS PER WORKER

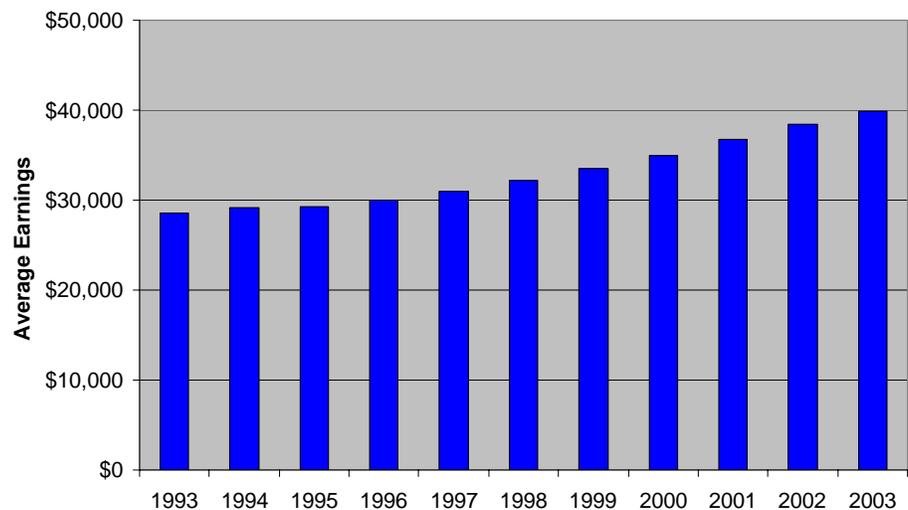

Why is it important:

One indicator of productivity is earnings-per-worker. Employment shifts from low to high paying jobs along with increased salaries both suggest increased productivity. Stable employment and slow growth in earnings limit productivity.

How are we doing:

Earnings-per-worker in Hampton Roads has been increasing steadily since 1997.

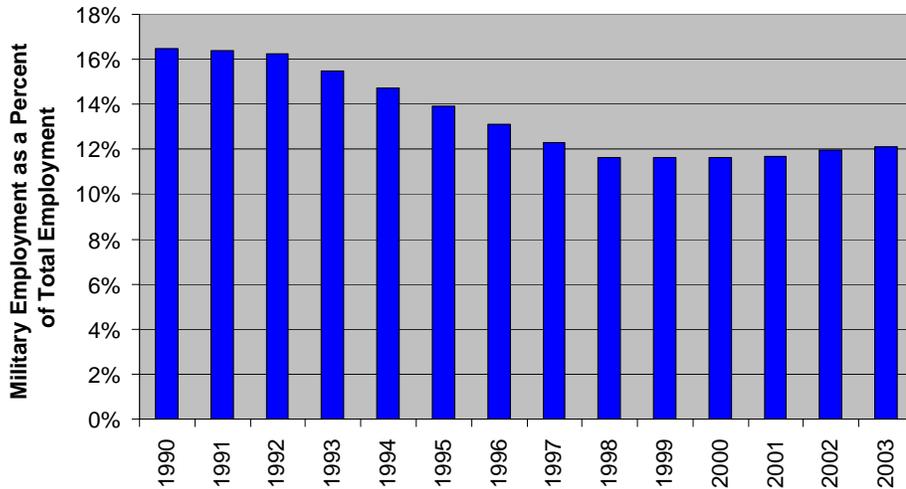

Hampton Roads Earnings Per Worker

Source: Bureau of Economic Analysis

FIGURE 1.23 CONCENTRATION OF MILITARY EMPLOYMENT

Hampton Roads Military Employment as a Percent of Total Employment

Source: Bureau of Labor Statistics

Why is it important:

Hampton Roads has one of the highest concentrations of military personnel in the world. The Department of Defense is the single largest employer in Hampton Roads. As a result, military employment plays a critical role in the regional economy.

How are we doing:

Decreasing military employment coupled with increased employment in the private sector reduced the concentration of military in Hampton Roads from 1992 to 1998. Recent increases in military employment have increase marginally faster than overall employment.

FIGURE 1.24 CYCLE OF NATIONAL DEFENSE SPENDING

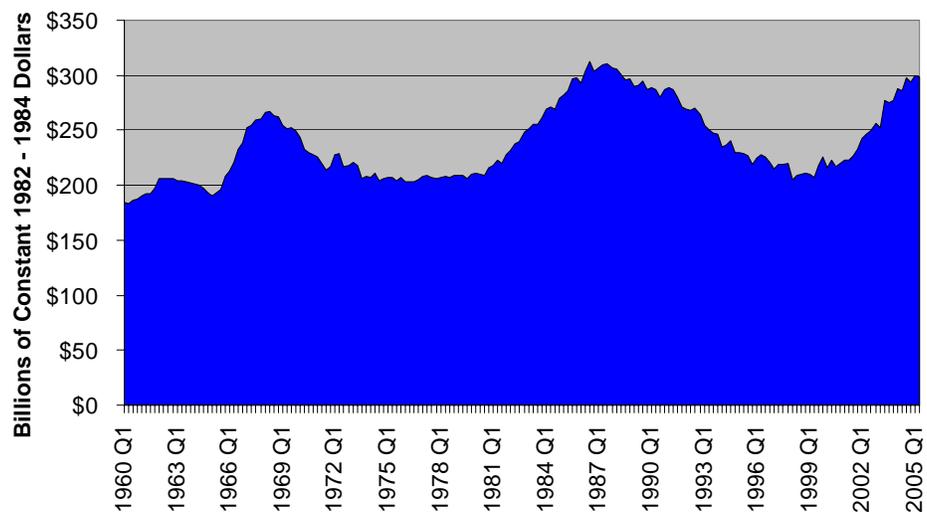

Why is it important:

Defense expenditures in Hampton Roads are closely tied to National defense outlays. National Defense spending has a direct impact on the regional economy

How are we doing:

National defense spending increased during the Reagan administration and fell during the collapse of the Iron-Curtain. Defense spending began increasing again around the turn of the century, helping Hampton Roads to avoid a recession.

Annualized Defense Outlays

Source: Survey of Current Business Magazine

FIGURE 1.25 INFLATION-ADJUSTED DEPARTMENT OF DEFENSE SPENDING IN HAMPTON ROADS

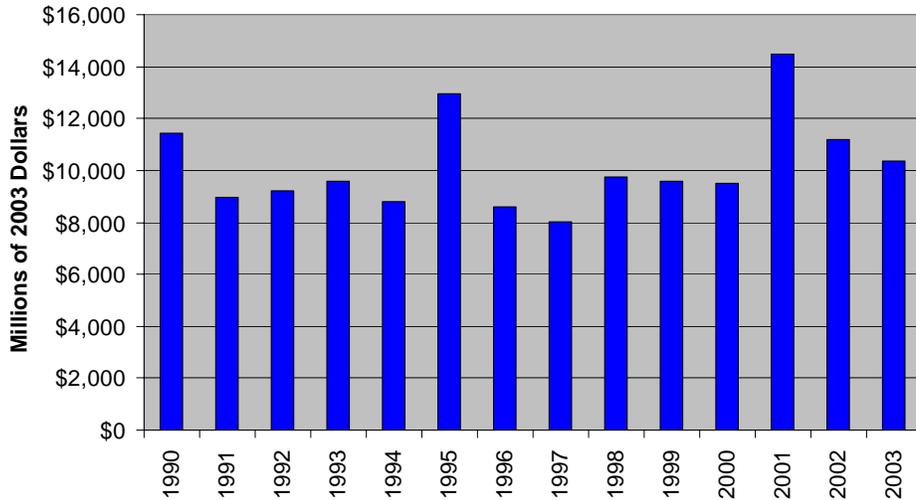

Why is it important:

Department of Defense spending in Hampton Roads is one of the region's primary expenditure streams. Changes in defense spending influence the regional business cycle. Figure 1.25 illustrates year-over-year changes in local defense expenditures

How are we doing:

Defense expenditures in Hampton Roads have stabilized the volatile market. Contracts for aircraft carriers in 1995 and 2001 brought a significant amount of new money into the local economy.

Real DoD Expenditures in Hampton Roads

Source: Consolidated Federal Funds Report

FIGURE 1.26 TOTAL MILITARY EMPLOYMENT IN HAMPTON ROADS

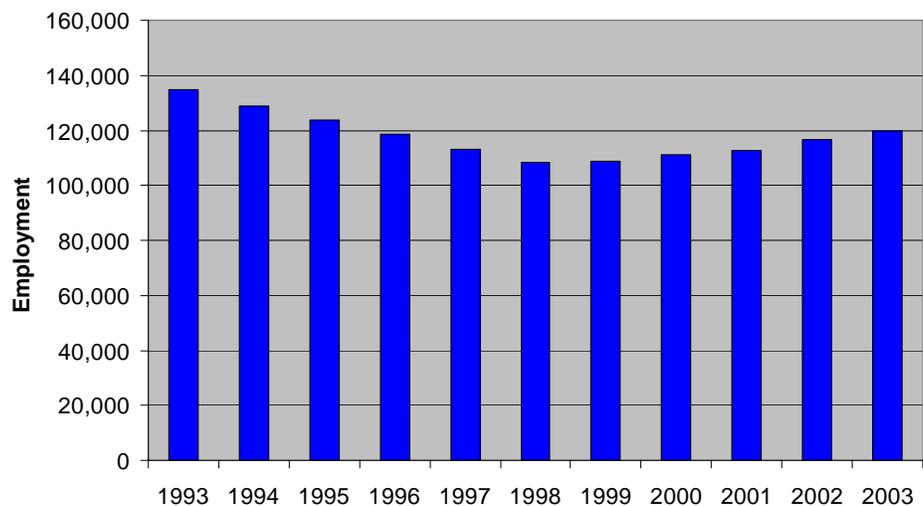

Why is it important:

The largest employment sector in Hampton Roads is the military. Trends in military employment are used in forecasting regional economic growth and in interpreting historical economic changes.

How are we doing:

After losing a significant number of military personnel in the nineties, military employment in Hampton Roads has seen a modest increase.

Military Employment in Hampton Roads

Source: Bureau of Economic Analysis

FIGURE 1.27 INFLATION ADJUSTED MILITARY INCOMES

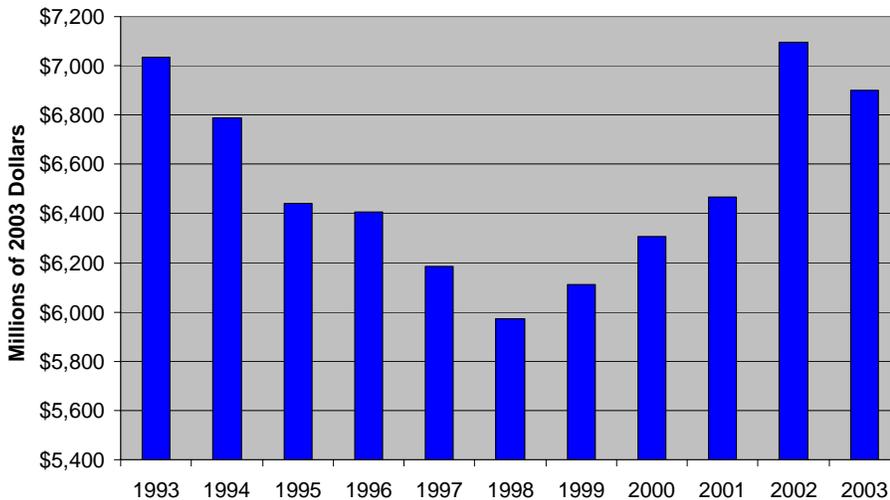

Why is it important:

The economic benefit of military employment in Hampton Roads is directly related to military incomes and the resulting expenditures by military personnel. As incomes increase, so do contributions to the local economy.

How are we doing:

Military incomes have rose substantially from 1998 through 2002 due, in part, to increases in military employment and pay.

Real Military Incomes in Hampton Roads

Source: Bureau of Economic Analysis

FIGURE 1.28 CONCENTRATION OF SHIP BUILDING AND REPAIR EMPLOYMENT IN HAMPTON ROADS

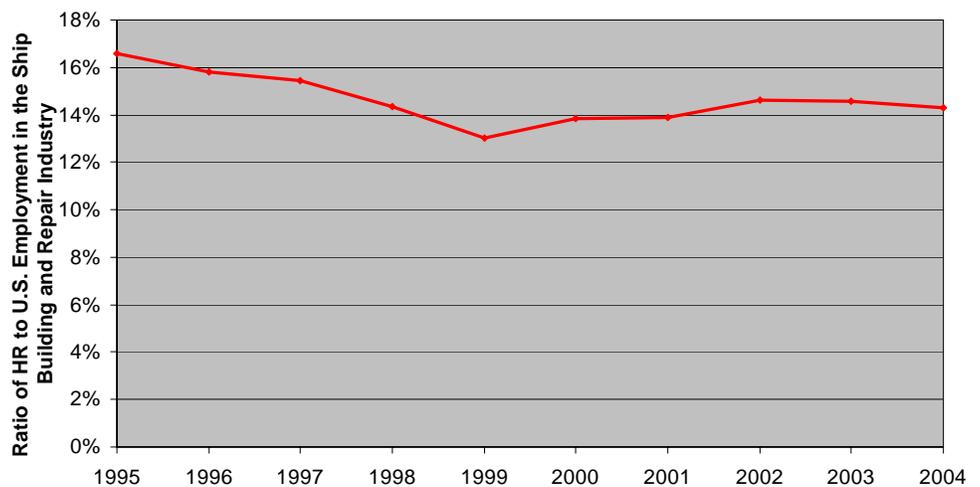

Why is it important:

The ship building and repair industry in Hampton Roads was a direct result of the region's disposition as a natural harbor. Over the years there has been a decline in the national ship building and repair industry, as foreign markets have become more competitive. Today Hampton Roads remains as one of the few areas in the U.S. specialized in ship repair.

How are we doing:

Ship building and repair in Hampton Roads is closely tied to DoD contracts. Decreasing naval demands have slightly eroded the Hampton Roads market share.

Hampton Roads Share of National Ship Building and Repair Employment

Source: Bureau of Labor Statistics

FIGURE 1.29 TOTAL SHIP BUILDING AND REPAIR EMPLOYMENT IN HAMPTON ROADS

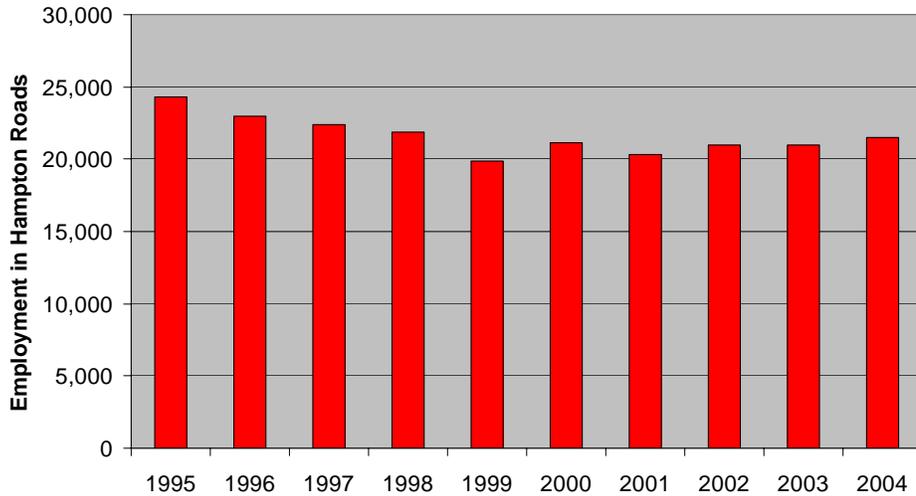

Why is it important:

As a major industry in Hampton Roads, trends in the ship building and repair industry play an important role in the economic strength of the region.

How are we doing:

Ship repair in Hampton Roads has declined over the latter half of the nineties before leveling out over the past five years. The ship building and repair industry is closely tied to military contracts, which have been stagnate for over a decade.

Ship Building and Repair Employment

Source: Bureau of Labor Statistics

FIGURE 1.30 DISTRIBUTION OF MARKET SHARE FOR PRINCIPAL EAST COAST PORTS

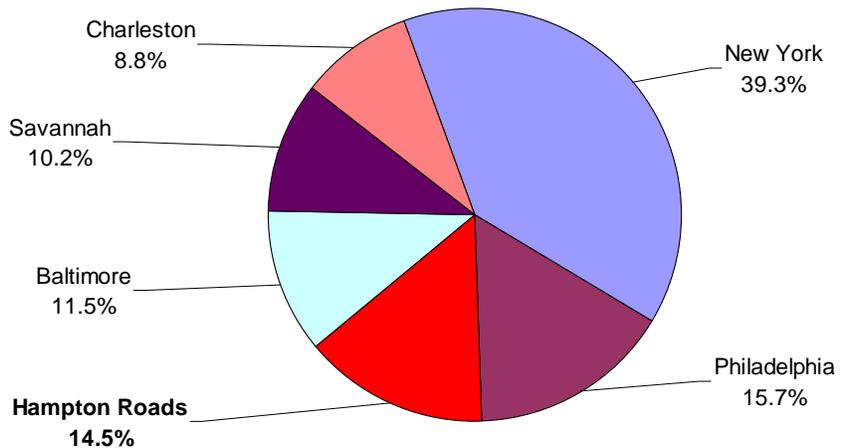

Why is it important:

The Port of Hampton Roads is a vital part of the region's economic engine. There is constant competition for port traffic on the east coast. Figure 1.30 identifies the major east coast ports and their market share.

How are we doing:

Over thirty-one million short tons flowed through the port in 2003, representing 14.5% of the traffic moving through east coast ports.

Percent of Total Imports and Exports for Principal East Coast Ports

Source: Port of Hampton Roads

FIGURE 1.31 HAMPTON ROADS MARKET SHARE OF IMPORTS & EXPORTS AT PRINCIPAL EAST COAST PORTS

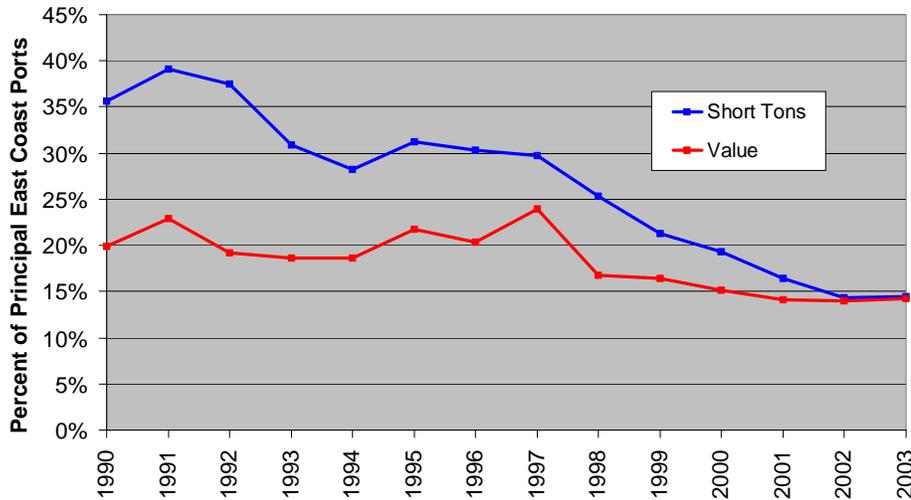

HR Share of East Coast Imports & Exports

Why is it important:

In order to remain a viable industry in Hampton Roads, the Port of Virginia must be competitive with other east coast ports

How are we doing:

Hampton Roads' market share has been decreasing over the past decade. There are many factors that have contributed to the decline including changes in foreign and domestic demand and strong competition from other ports.

Source: Port of Hampton Roads

FIGURE 1.32 FOREIGN AND DOMESTIC VESSEL DEPARTURES

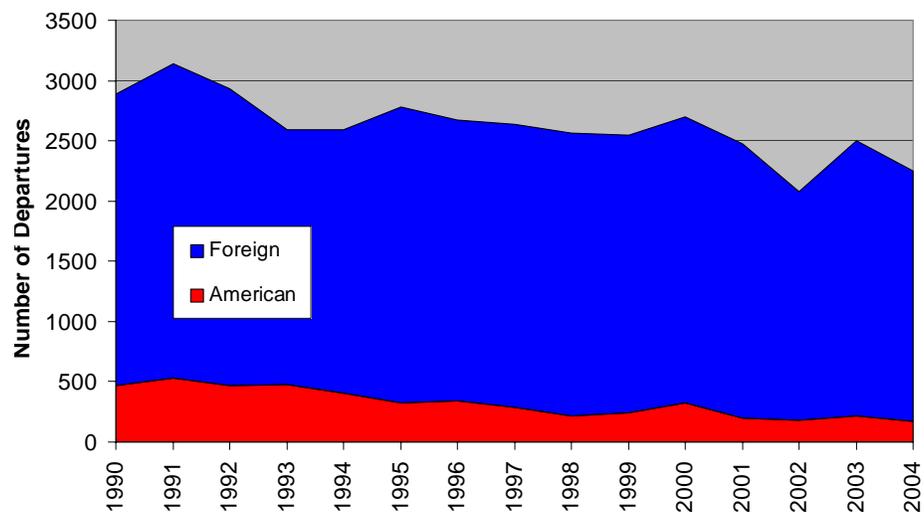

Why is it important:

In order to better understand trends in the demand for port services it is important to recognize the source and destination of port traffic.

How are we doing:

The majority of the goods moved throughout the U.S. are transported via truck and rail. By contrast the vast majority of port traffic in Hampton Roads moves by water, with either a foreign origin or a foreign destination. Over the past decade vessel departures have decreased significantly. Changes in demand and larger container ships have contributed to the decline in the number of vessels.

Vessel Departures from Hampton Roads

Source: Port of Hampton Roads

FIGURE 1.33 GENERAL CARGO IMPORTS & EXPORTS

General Cargo in Hampton Roads

Why is it important:

General cargo, which includes both containerized and break-bulk cargo, is the fastest growing segment of the shipping industry. The ability to attract and manage general cargo is vital to the port's future.

How are we doing:

General cargo imports and exports have been steadily increasing in Hampton Roads. Improvements to basic infrastructure such as port capacity and regional roadways are imperative in order to enable continued growth in this sector

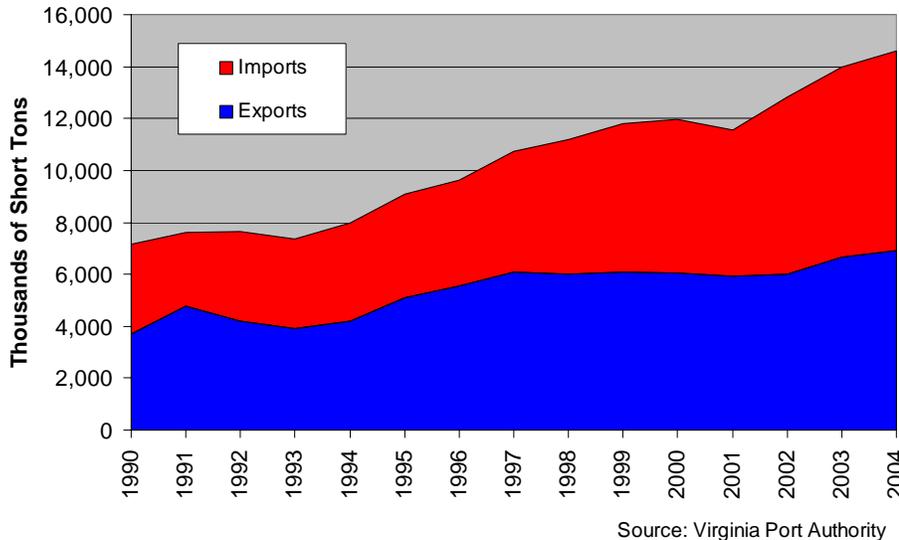

FIGURE 1.34 COAL LOADINGS

Why is it important:

Coal loadings have remained a major source of Hampton Roads' port traffic, especially during the early nineties.

How are we doing:

The drop in world-wide demand for U.S. coal is evident in the decline in the amount of coal loadings in Hampton Roads. Since 1991 coal loadings in Hampton Roads have been dropped by almost 60%.

Coal Loadings in Hampton Roads

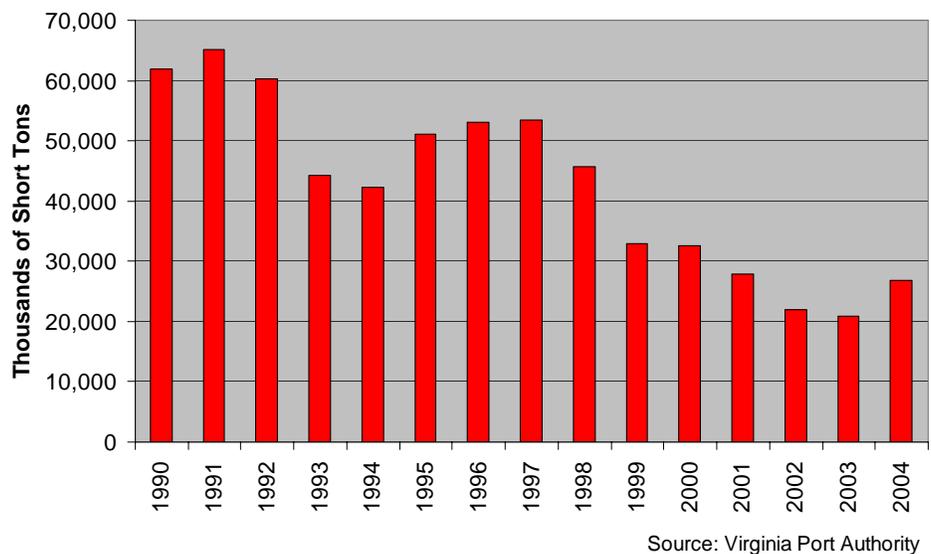

FIGURE 1.35 HAMPTON ROADS DESEASONALIZED TAXABLE HOTEL SALES

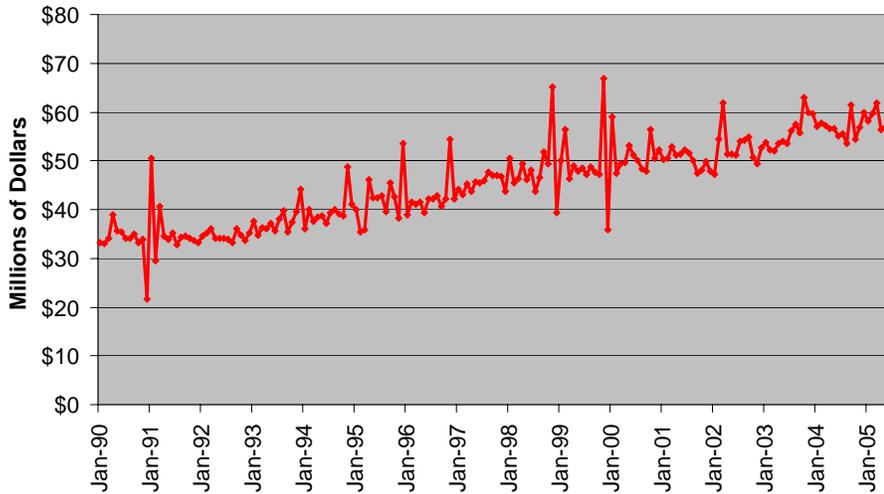

Why is it important:

In 2001 tourists contributed \$2.5 billion to the Hampton Roads economy. Taxable hotel sales provide a good measure of the number of tourists that vacation in Hampton Roads, providing a consistent source with which to gauge tourist expenditures.

How are we doing:

The tourism industry has been growing steadily in Hampton Roads since the early nineties. Recent reports on traffic congestion could threaten the region's reputation as a "drive to" resort destination.

Deseasonalized Taxable Hotel Sales

Source: Virginia Department of Taxation

FIGURE 1.36 EMPLOYMENT IN THE HAMPTON ROADS LEISURE AND HOSPITALITY INDUSTRY

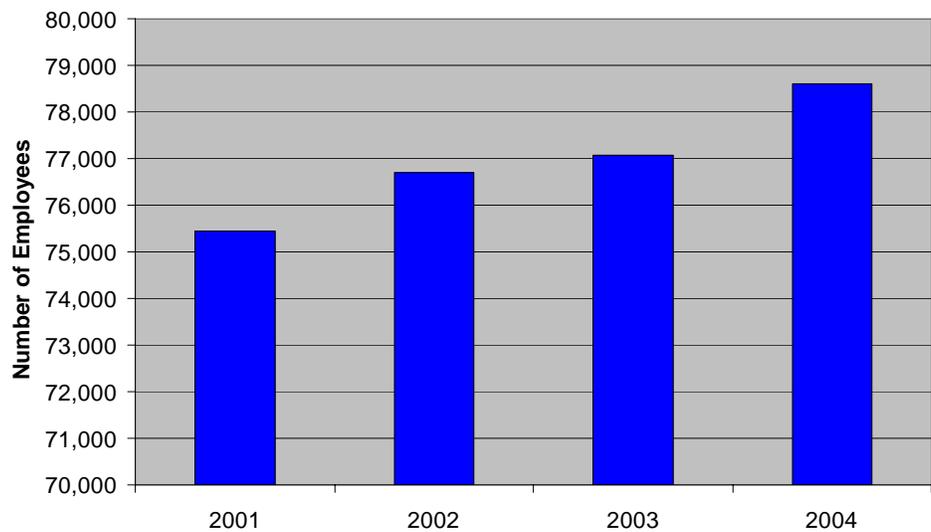

Why is it important:

Increases in tourist activity are reflected in the demand for employment in the leisure and hospitality industry.

How are we doing:

Employment in the local leisure and hospitality industry has been steadily increasing since 2001. Continued success in drawing tourists to the region is vital for the leisure and hospitality industry.

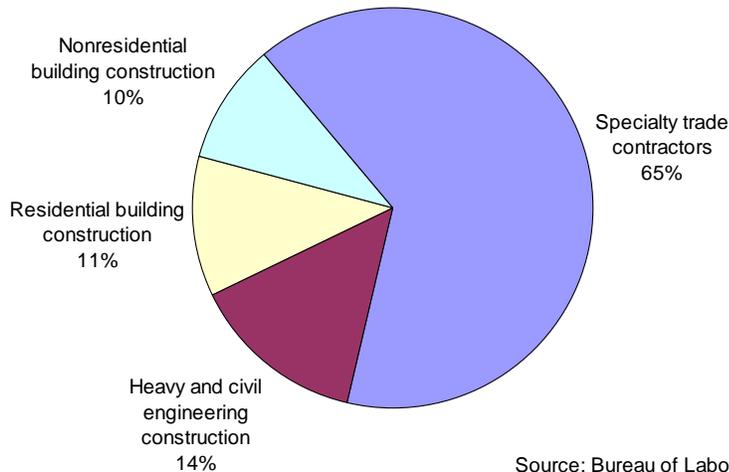

Leisure & Hospitality Employment

Source: Bureau of Labor Statistics

FIGURE 1.37 DISTRIBUTION OF HAMPTON ROADS CONSTRUCTION EMPLOYMENT

Construction Employment by Sub Sector

Source: Bureau of Labor Statistics

Why is it important:

The value of construction and construction employment are often used as an economic growth indicator. The distribution of construction indicates the concentration of construction in Hampton Roads.

How are we doing:

The majority of construction employment in Hampton Roads is in the specialty trade sub sector. Non-residential and residential contractors have a roughly equal distribution in Hampton Roads.

FIGURE 1.38 NEW BUILDING PERMITS ISSUED IN HAMPTON ROADS

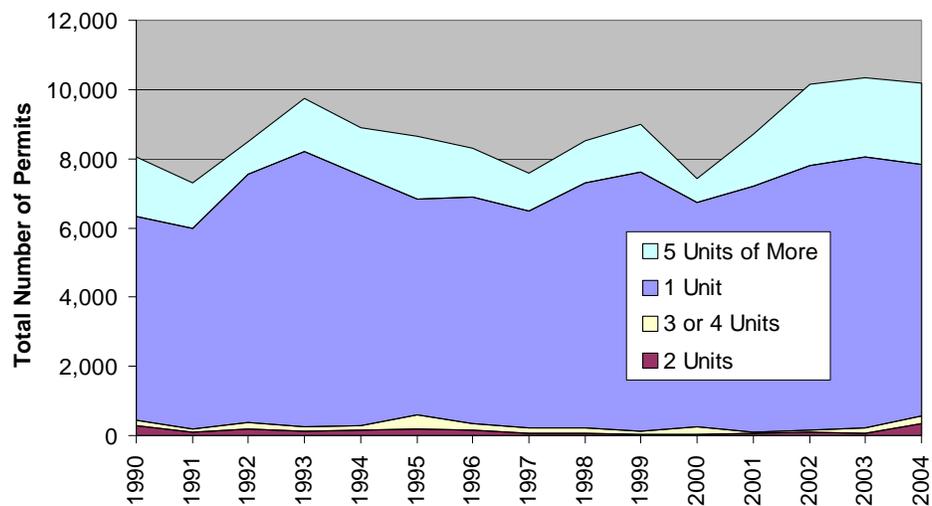

Why is it important:

Building permit information reflects on the general wellbeing of the residential construction industry. Large increases or decreases in the number of building permits have both social and economic implications.

How are we doing:

The number of building permits in Hampton Roads remained relatively constant through the nineties. Recently the number of building permits has increased, especially for buildings with 5 units of more.

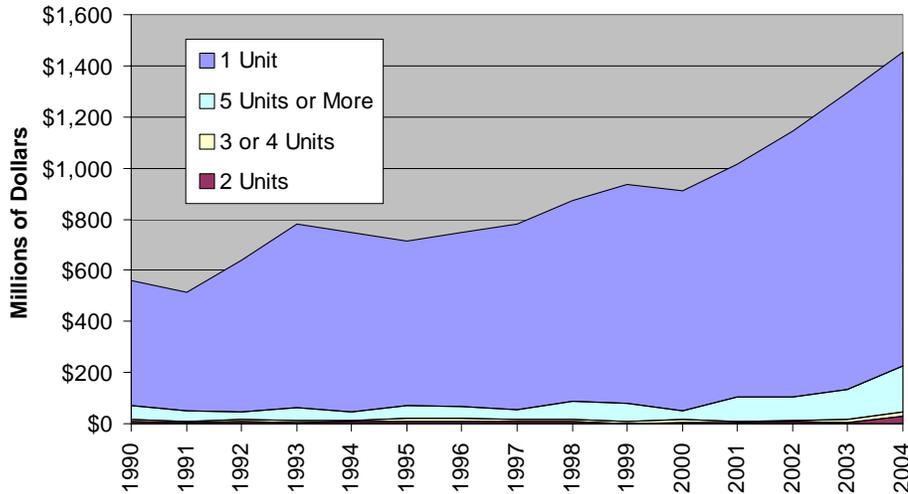

Building Permits in Hampton Roads

Source: U.S. Census Bureau

FIGURE 1.39 VALUE OF NEW BUILDING PERMITS ISSUED IN HAMPTON ROADS

Value of Building Permits in Hampton Roads

Source: U.S. Census Bureau

Why is it important:

The value of building permits is an excellent indicator of residential construction activity. Both the number and the value of building permits reflect on the demand for housing in relation to the price of housing.

How are we doing:

The value of residential building permits has increased substantially over the past four years, reflecting on both the demand for high-end housing and the increase in housing prices.

FIGURE 1.40 CONSTRUCTION EMPLOYMENT IN HAMPTON ROADS

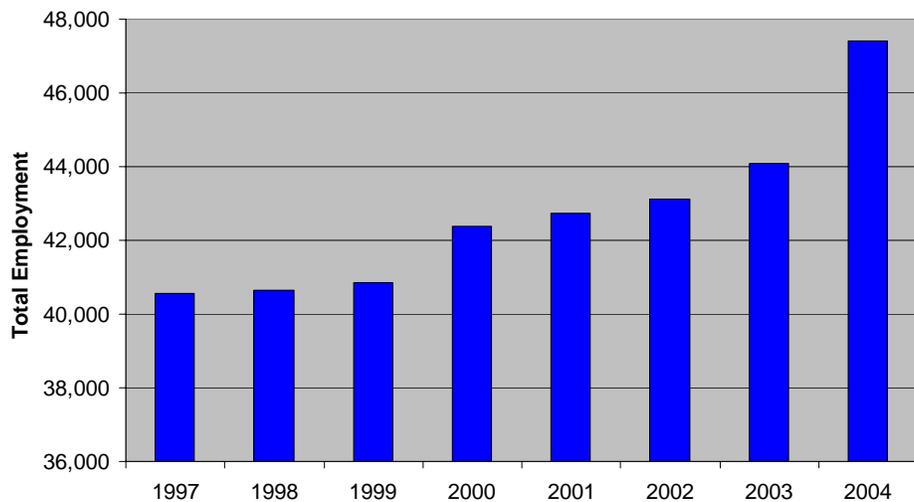

Why is it important:

Construction employment reveals trends in both the commercial and residential construction industries. Increasing construction employment signifies a healthy economic climate.

How are we doing:

Over the past four years, Hampton Roads has seen strong growth in construction employment. Both the residential and commercial markets have been stimulated by low interest rates and high demand.

Construction Employment

Source: Bureau of Labor Statistics

FIGURE 1.41 INFLATION ADJUSTED TAXABLE SALES IN HAMPTON ROADS

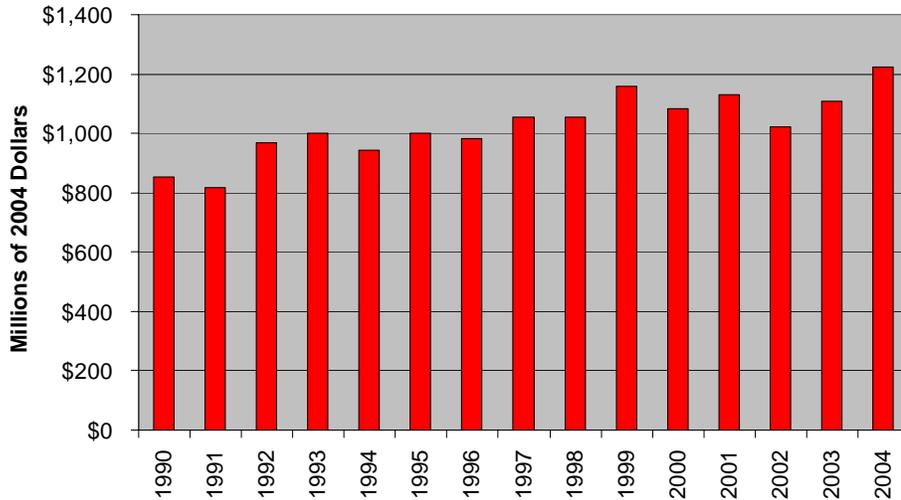

Why is it important:

Retail trade is Hampton Roads second largest industry. Trends in taxable sales exhibit the interaction between consumer expenditures and the retail trade industry. Strong retail sales imply that consumer confidence is high and that there is a healthy market for retail trade.

How are we doing:

Taxable sales slowed in 2000 and 2001 as result of the sluggish economy. Increases in military pay and a growing economy have resulted in taxable sales growth over the last couple of years.

Real Taxable Sales

Source: Virginia Department of Taxation

FIGURE 1.42 DISTRIBUTION OF HAMPTON ROADS RETAIL EMPLOYMENT

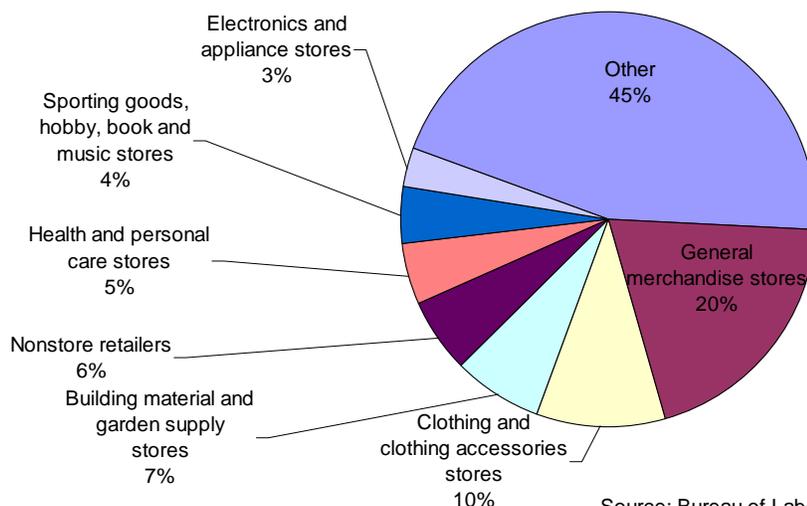

Why is it important:

The retail sector hosts a variety of sub sectors, each of which are subject to unique market forces. In order to appreciate how market changes might affect the retail industry it is important to understand the composition of the retail industry.

How are we doing:

General merchandise and clothing account for the majority of the retail industry in Hampton Roads. The remainder is comprised of a diverse grouping of smaller sub sectors.

Retail Employment by Sub Sector

MISCELLANEOUS

The Demographics section of this report includes charts on population, population growth, population density, births, deaths, age & gender distributions, race & ethnicity, and occupations.

FIGURE 2.1 POPULATION OF HAMPTON ROADS AND COMPETING METRO AREAS IN 2003

Why is it important:

Population provides a context in order to better understand many economic and social indicators.

How are we doing:

In 2003 Hampton Roads was the 32nd most populated metropolitan statistical area in the United States. There is a significant range of populations among Hampton Roads' competitors. Hampton Roads' population is average in relation to competing metro areas.

Source: U.S. Census Bureau

FIGURE 2.2 POPULATION GROWTH RATES IN HAMPTON ROADS AND THE UNITED STATES

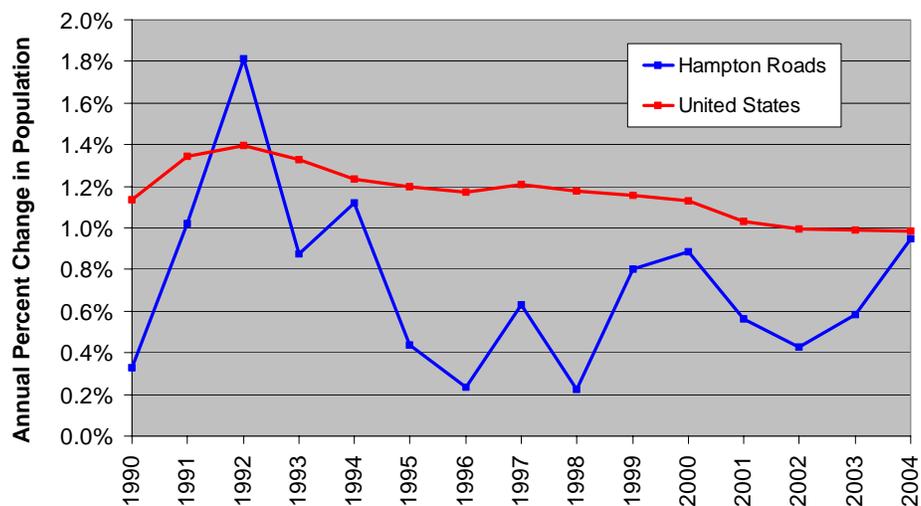

Why is it important:

Population growth tracks closely with other expressions of economic growth. Changes in population can have very significant impacts on employment and income statistics.

How are we doing:

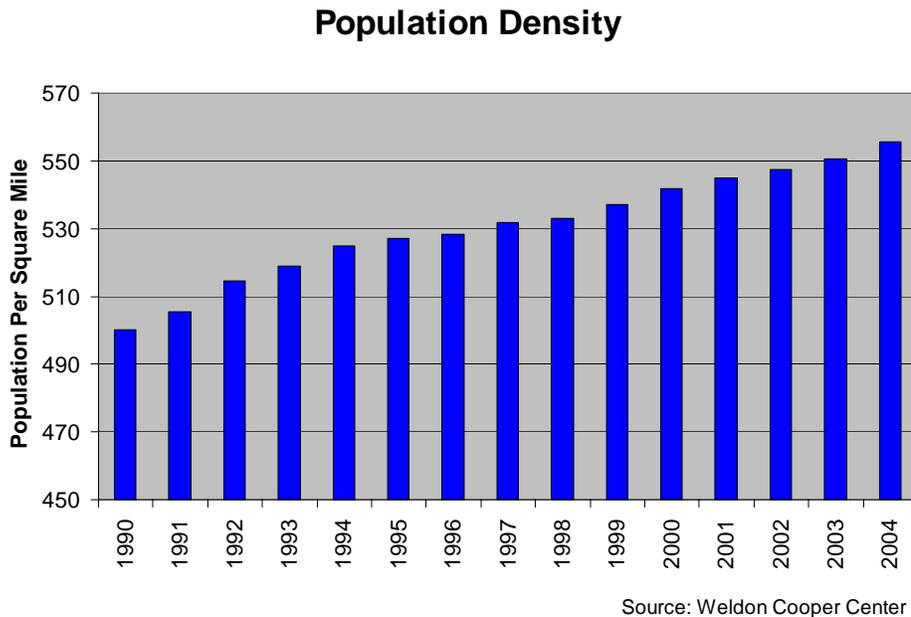

Because of its limited geographical diversity, regional population growth is a great deal more volatile than national growth. Historically, Hampton Roads has had slow growth rates. This slow growth is evident in Figure 2.2.

Annual Population Growth

Source: Weldon Cooper Center & U.S. Census Bureau

FIGURE 2.3 HAMPTON ROADS POPULATION DENSITY

Why is it important:

Population density is both a measure of population concentration and geographic sprawl.

How are we doing:

According to the U.S. Census Bureau, Hampton Roads ranked 52nd in terms of population density for all metro areas. Population density has increased along with the total population as land area in Hampton Roads has remained relatively fixed.

FIGURE 2.4 COMPONENTS OF POPULATION CHANGE IN HAMPTON ROADS

Why is it important:

Changes in regional population are due to births, deaths, and migration. Reviewing the components of population provides a clearer picture as to changes in a region's demographics.

How are we doing:

Over the past decade, Hampton Roads has realized a net out-migration of over 26,000 persons. The number of births and deaths appears to be quite stable.

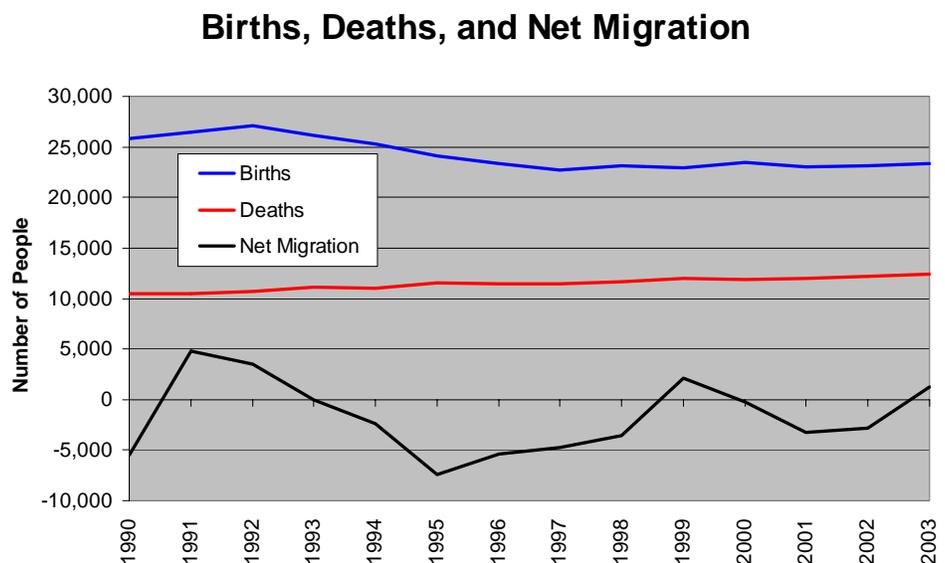

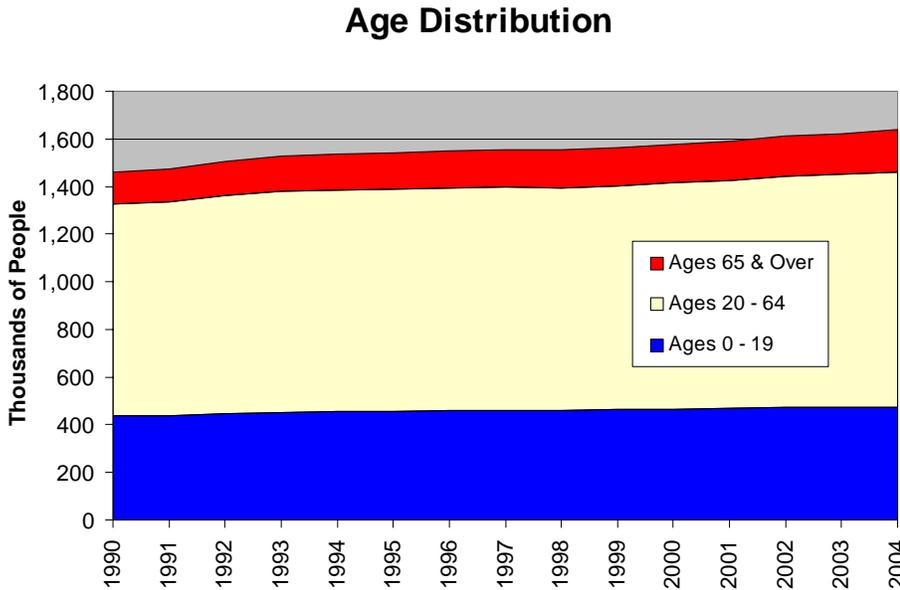

FIGURE 2.5 AGE DISTRIBUTION OF THE HAMPTON ROADS POPULATION

Source: Regional Economic Modeling, Inc.

Why is it important:

The age distribution of a region has both social and economic implications. The age distribution provides some insight into the need for family and senior services as well as the availability of labor.

How are we doing:

The age distribution in Hampton Roads has remained relatively constant for the past decade. As the baby boomers begin to retire, the number of seniors is likely to rise and the "working cohort" will begin to shrink.

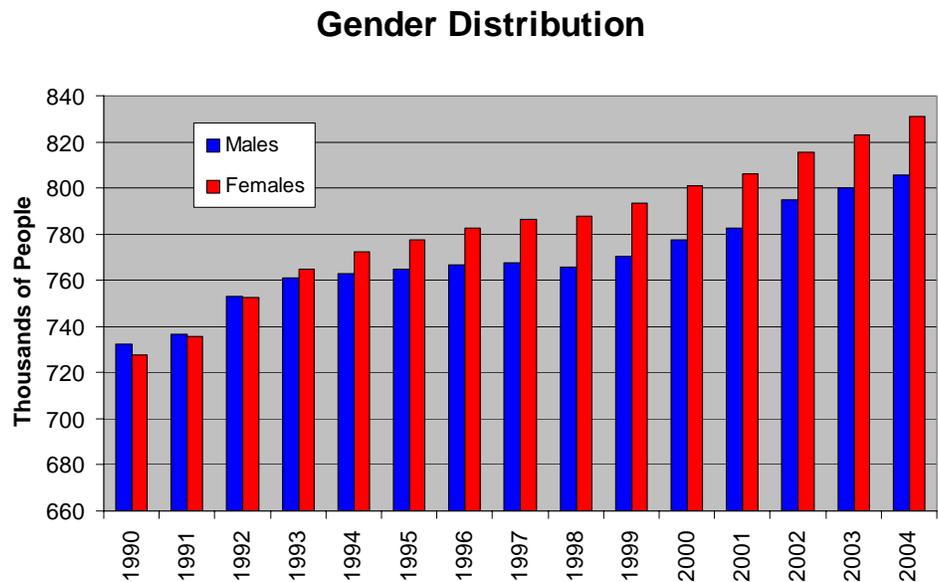

FIGURE 2.6 GENDER DISTRIBUTION FOR THE HAMPTON ROADS POPULATION

Why is it important:

Men and women require distinctive services, tend to fill different occupations, and impact on the social and economic landscape in a unique manner.

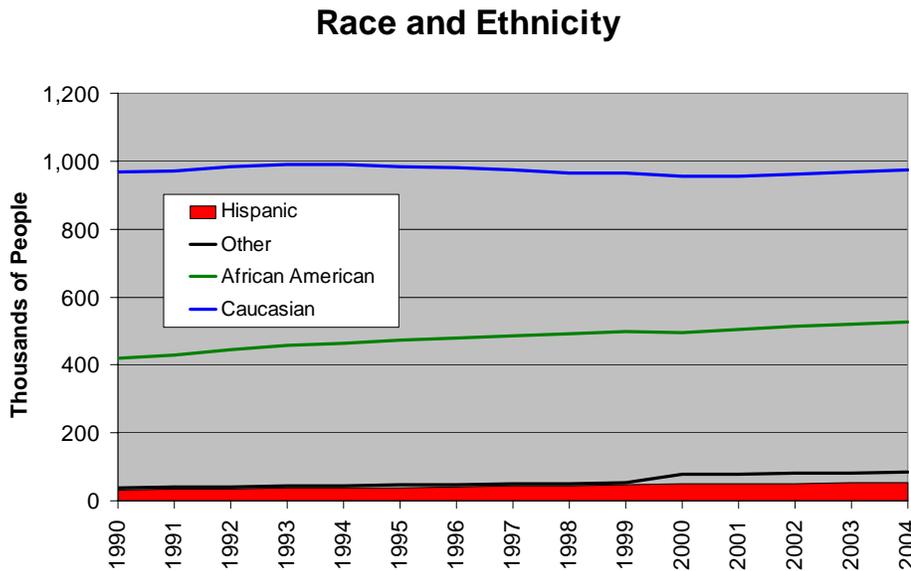

How are we doing:

Since 1992, the number of women in Hampton Roads has surpassed the number of men. Women in Hampton Roads now outnumber men by a substantial margin.

Source: Regional Economic Modeling, Inc.

FIGURE 2.7 RACE AND ETHNICITY IN HAMPTON ROADS

Source: Regional Economic Modeling, Inc.

Why is it important:

Understanding racial and ethnic diversity is important in order to ensure equal opportunities for all persons. One should employ localized diversity statistics when evaluating regional employment trends.

How are we doing:

Hampton Roads has an above average proportion of African Americans when compared to other MSAs. Conversely, Hampton Roads' population has very few other minorities or persons of Hispanic ethnicity.

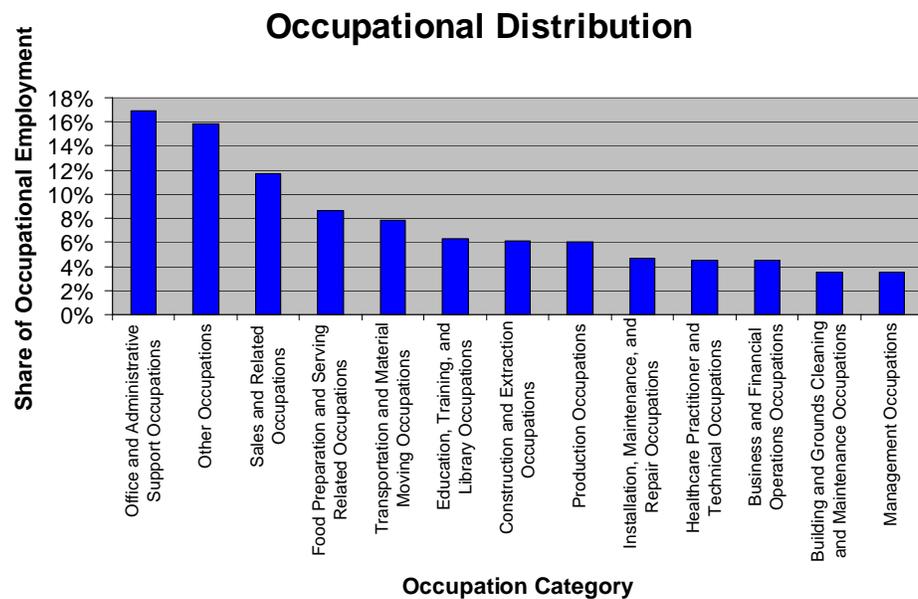

FIGURE 2.8 DISTRIBUTION OF OCCUPATIONS IN HAMPTON ROADS

Why is it important:

Employment is often classified by industry, although persons seeking employment typically search by occupation. Figure 2.8 illustrates the occupational and skills distribution of persons living in Hampton Roads.

How are we doing:

Roughly 17% of workers in Hampton Roads are employed in office and administrative support occupations. Sales and food related occupations round out the top three occupational categories.

Source: Bureau of Labor Statistics

THE ECONOMY

DEMOGRAPHICS

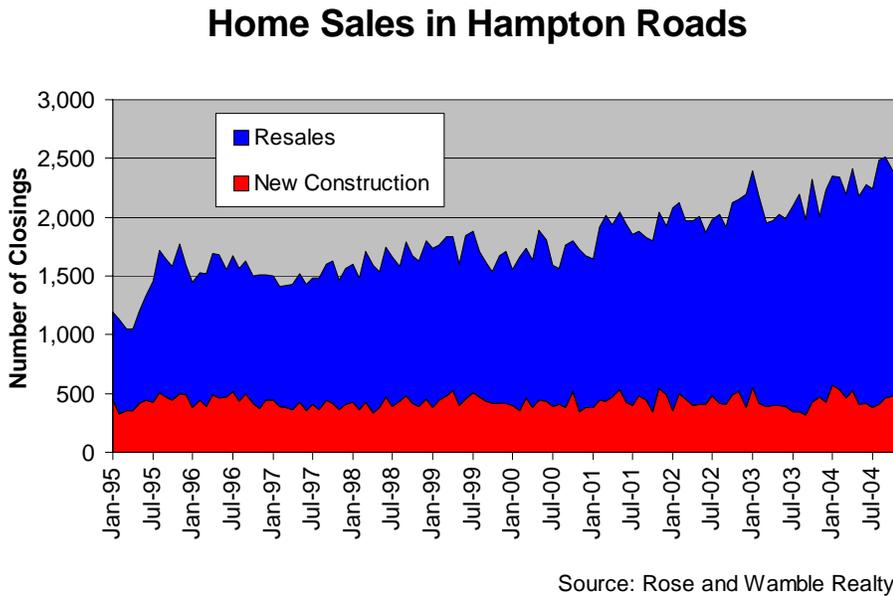

HOUSING

TRANSPORTATION

MISCELLANEOUS

The Housing section of this report includes information on home sales, housing prices, home ownership rates, and housing affordability

FIGURE 3.1 PRE-OWNED AND NEW CONSTRUCTION HOME SALES IN HAMPTON ROADS

Why is it important:

Regional home sales react to both local and national market pressures. Large increases in new construction often indicate a growing population whereas a high number of housing resales is typically the result of economic demands.

How are we doing:

Housing construction has remained relatively constant over the past decade. Housing resales have increased substantially due in part to a stable local economy and low mortgage interest rates. As a result, many residents have either up-graded their homes or become homeowners.

FIGURE 3.2 HOUSING PRICE INDICES FOR HAMPTON ROADS, THE MID ATLANTIC REGION, AND THE UNITED STATES

Why is it important:

Housing costs represent the single largest expense for the majority of American households. As a result, increases in the price of housing are directly correlated with increases in the cost of living.

How are we doing:

Housing prices in the Mid Atlantic and throughout the U.S. have been steadily increasing since 1997. Hampton Road started to outpace both the Mid Atlantic and the U.S. in mid 2003 as local housing prices began to soar.

Housing Price Index

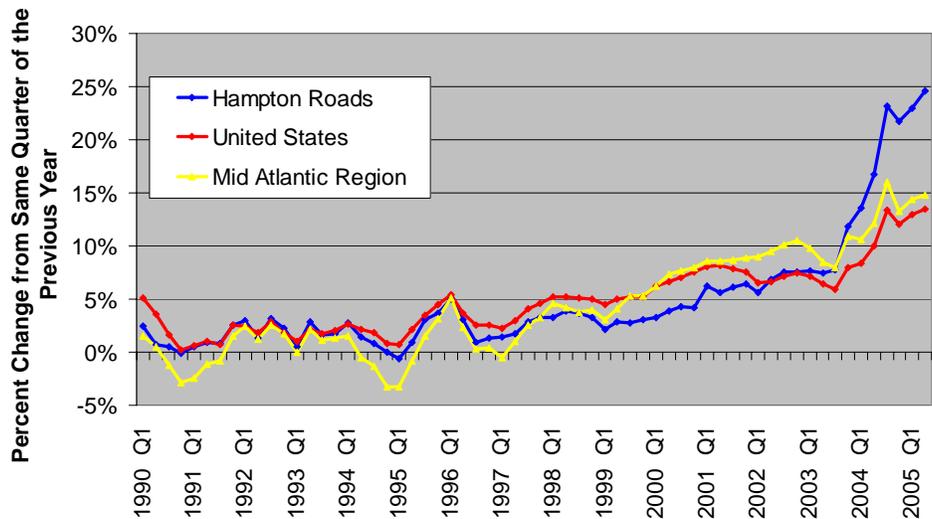

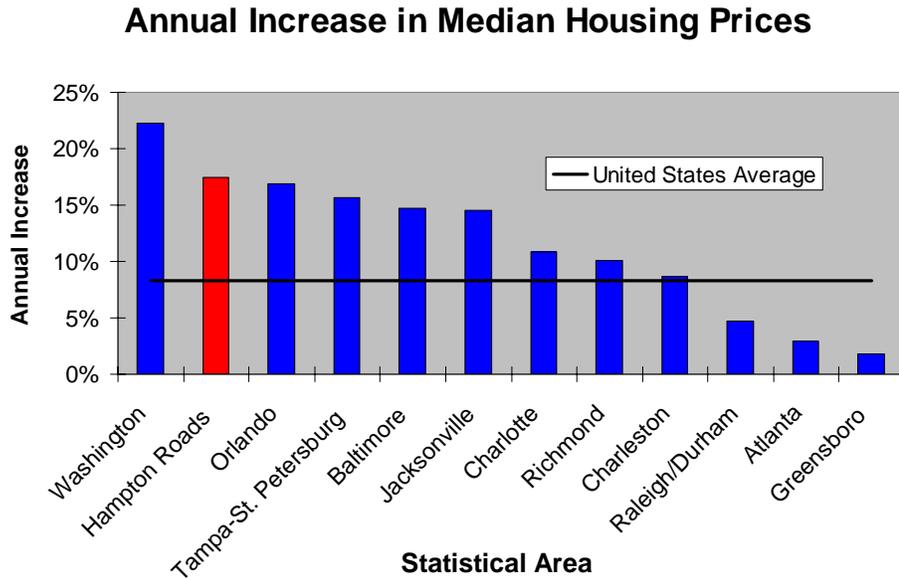

FIGURE 3.3 HOUSING PRICE INCREASES IN HAMPTON ROADS AND COMPETING METRO AREAS FROM 2003 TO 2004

Source: National Association of Realtors

Why is it important:

Housing is a major component in the cost of living, affecting how the Hampton Roads region can compete for employment with other metro areas.

How are we doing:

Hampton Roads has experienced an enormous inflation in home prices over the past year. The increase in housing prices has enhanced the wealth of homeowners while reducing the affordability of those attempting to enter the housing market. Many residents took advantage of the market by using their increased equity to purchase big-ticket items or upgrade their homes.

FIGURE 3.4 HOME OWNERSHIP RATES IN HAMPTON ROADS

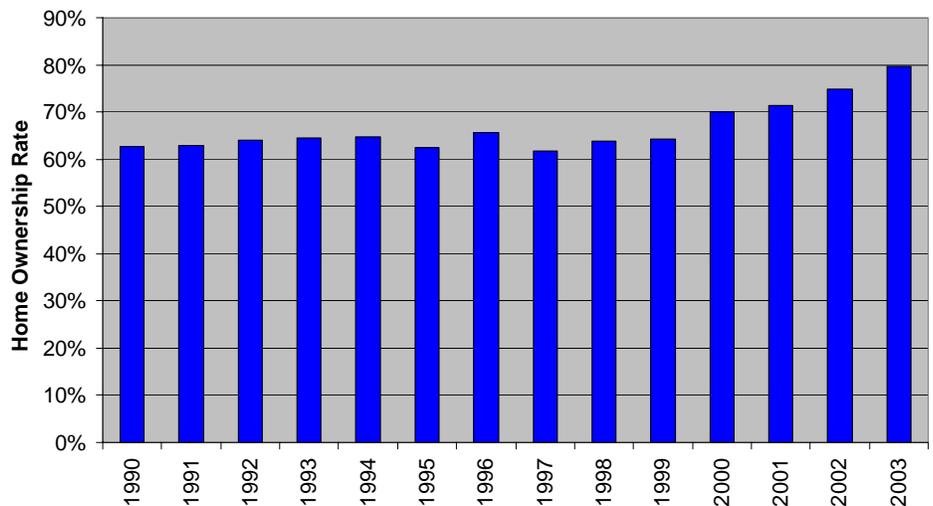

Why is it important:

As is so often stated by the Department of Housing and Urban Development, owning your own home is the attainment of the American Dream. Increased home ownership builds wealth and creates stable communities. The federal government encourages home ownership because of the countless positive attributes associated with homeownership.

How are we doing:

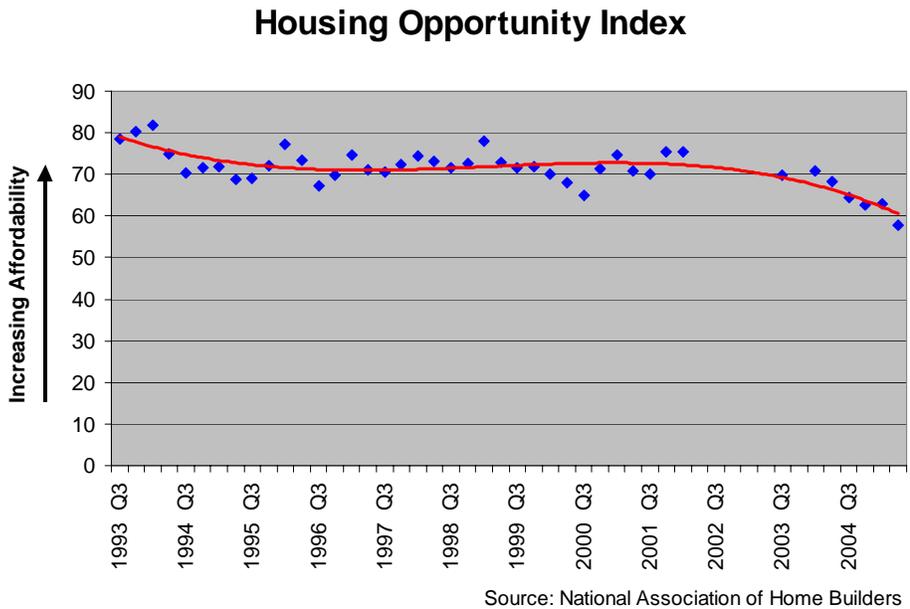

Due in part to a stable economy and low mortgage interest rates, home-ownership rates in Hampton Roads have been rising since 1999.

Home Ownership Rates

Source: U.S. Census

FIGURE 3.5 HAMPTON ROADS HOUSING OPPORTUNITY INDEX

Why is it important:

The ability to purchase housing improves the quality of life by offering individuals the opportunity to take advantage of the benefits associated with homeownership.

How are we doing:

As housing prices increase, housing opportunity decreases. From the mid to latter nineties housing opportunity remained relatively constant in Hampton Roads. The recent inflation in housing costs has diminished the opportunity for many to become homeowners.

FIGURE 3.6 HOUSING AFFORDABILITY IN HAMPTON ROADS

Why is it important:

The availability of affordable housing ensures housing opportunity for persons of all income levels. Access to affordable housing is the best way to prevent individuals and families from becoming homeless. The affordability of a 2-bedroom apartment rental is the housing industry standard in determining affordability.

How are we doing:

As housing values continue to increase in Hampton Roads, affordable housing has become scarce. At present an individual would require 3 full-time minimum wage jobs to afford an average 2-bedroom apartment.

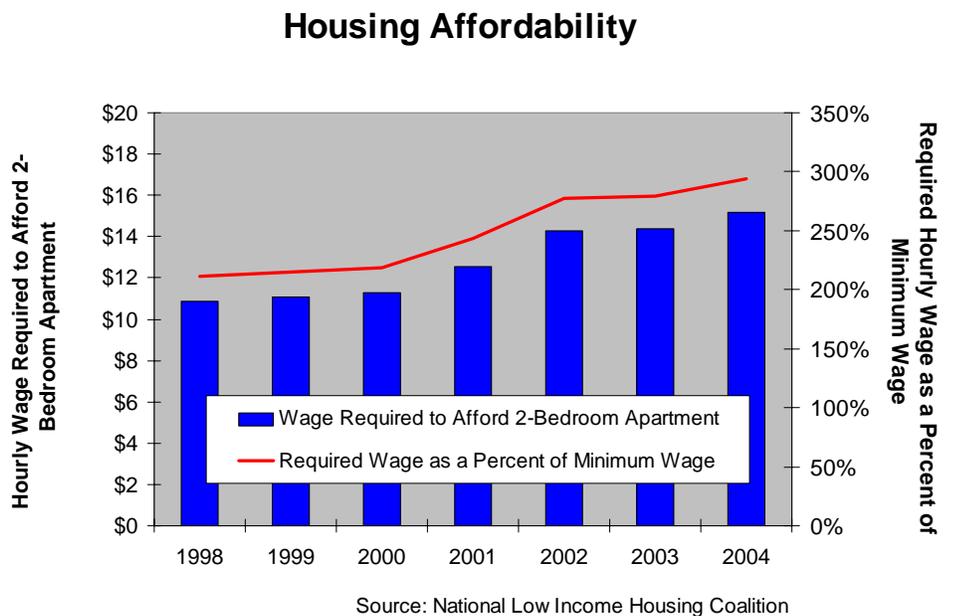

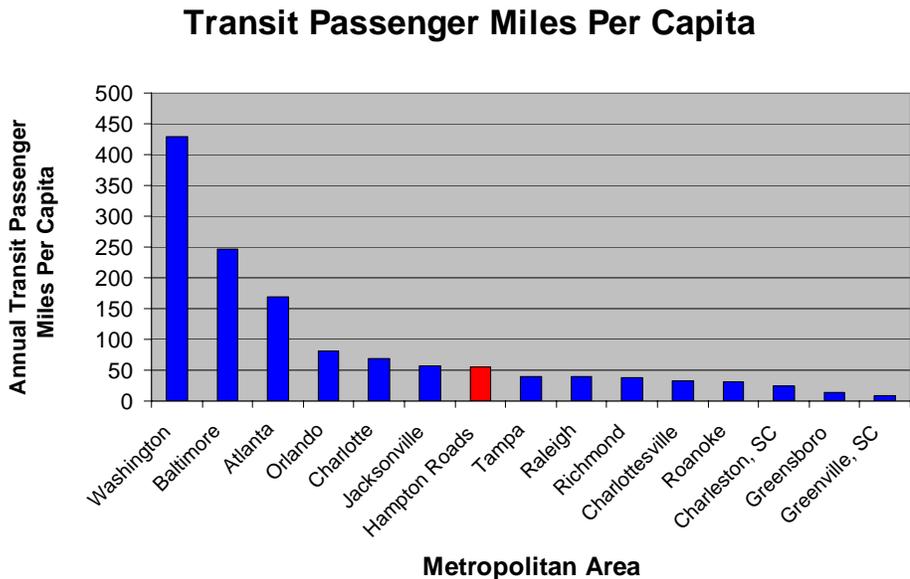

FIGURE 4.9 TRANSIT PASSENGER MILES IN HAMPTON ROADS AND COMPETING METRO AREAS

Why is it important:

Transit passenger miles tend to increase along with the size and density of a metro area. Figure 4.9 illustrates transit usage in Hampton Roads compared to other metro areas.

How are we doing:

Transit usage is relatively low in Hampton Roads due in part to the region's low population density and wide geographical dispersion of employment centers. This is consistent with other low-density metro areas.

Source: Federal Transit Administration & U.S. Census Bureau

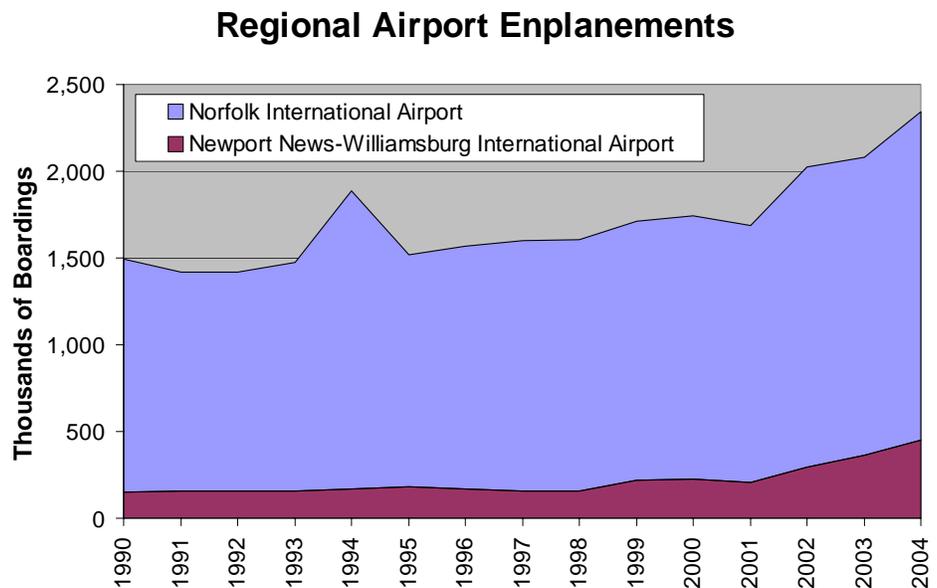

FIGURE 4.10 AIRPORT ENPLANEMENTS AT HAMPTON ROADS MAJOR AIRPORTS

Why is it important:

As the market inches ever closer to a global economy, access to airports and air-travel becomes increasingly important.

How are we doing:

Value priced airlines have increased competition in the Hampton Roads market, driving down prices and increasing air traffic. Evidence of the effect that prices have on the demand for travel is apparent after a price war in 1994 brought about a surge in air travel.

Source: Federal Aviation Administration

THE ECONOMY

DEMOGRAPHICS

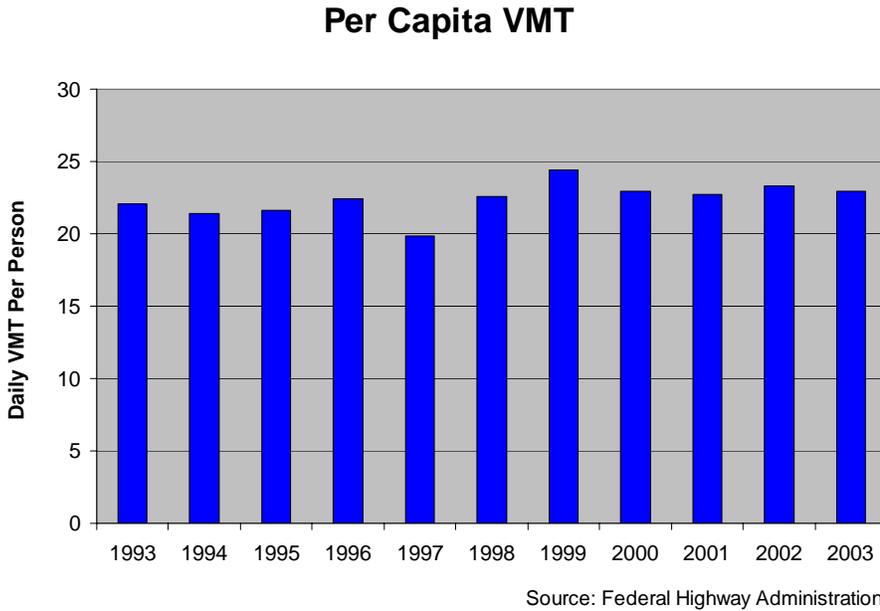

HOUSING

TRANSPORTATION

MISCELLANEOUS

The transportation section of this report includes information on vehicle miles traveled, congestion, traffic accidents, transit usage, and air travel.

FIGURE 4.1 PER CAPITA DAILY VEHICLE MILES TRAVELED IN HAMPTON ROADS

Why is it important:

Per capita vehicle miles traveled (VMT) is the industry standard in determining the amount of traffic generated per person. Increased sprawl, higher employment to population ratios, and low transit usage can put upward pressure on a region's per capita VMT.

How are we doing:

Hampton Roads' per capita VMT has remained relatively constant over the past four years, despite changes in commuting patterns.

FIGURE 4.2 PER CAPITA DAILY VEHICLE MILES TRAVELED IN HAMPTON ROADS AND COMPETING METRO AREAS

Why is it important:

Traffic patterns and congestion have a bearing on regional competitiveness and quality of life. Per capita VMT is a reflection of a region's commuting distances, density, and transit usage.

How are we doing:

Per capita VMT in Hampton Roads is relatively low when compared to other regions, suggesting that regional commuting distances are relatively short.

Per Capita VMT in Competitor Regions

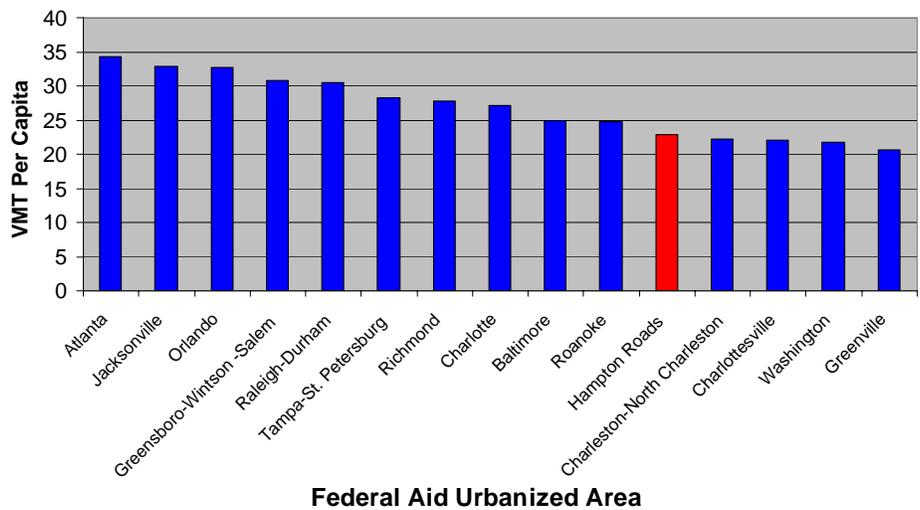

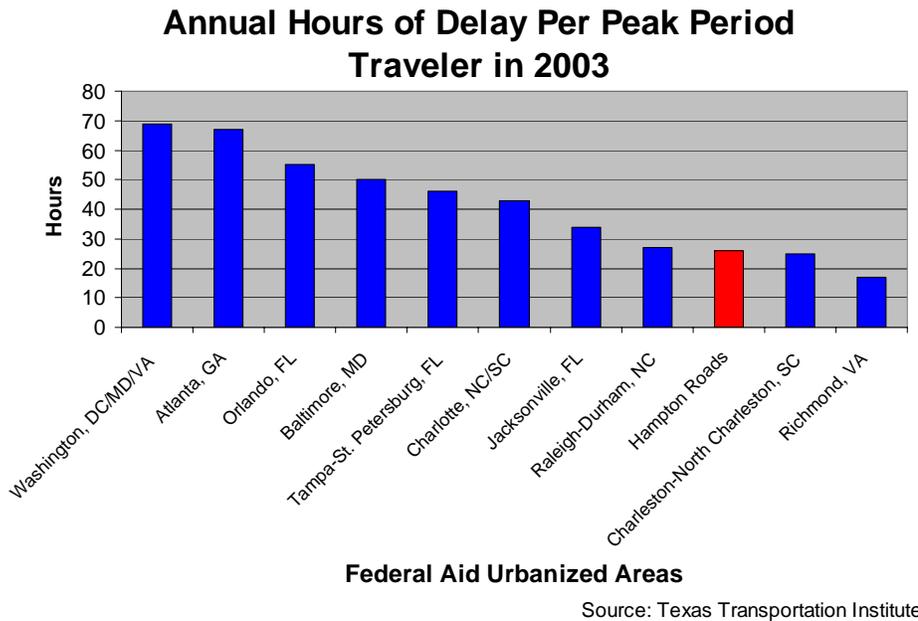

FIGURE 4.3 DELAY PER PEAK PERIOD TRAVELER FOR HAMPTON ROADS AND COMPETING REGIONS IN 2003

Why is it important:

While VMT refers to the distance traveled, annual hours of delay reflects the degree of congestion. Figure 4.3 illustrates how local congestion compares with congestion in competing metro areas.

How are we doing:

Hampton Roads' congestion problems appear to compare favorably with other competing metro areas. The methodology used to determine delay, however, fails to take into account the capacity reduction that occurs at the bridges, tunnels, and bottlenecks that are unique to this region.

FIGURE 4.4 DELAY PER PEAK PERIOD TRAVELER IN HAMPTON ROADS

Why is it important:

Congestion trends are very important because of the large impact that congestion has on both the cost of business and quality of life. Residents and businesses base their estimates of congestion on prior commuting experiences when planning for the future.

How are we doing:

Congestion in Hampton Roads increased during the latter half of the nineties. The recent volatility indicates shifts in commuting patterns.

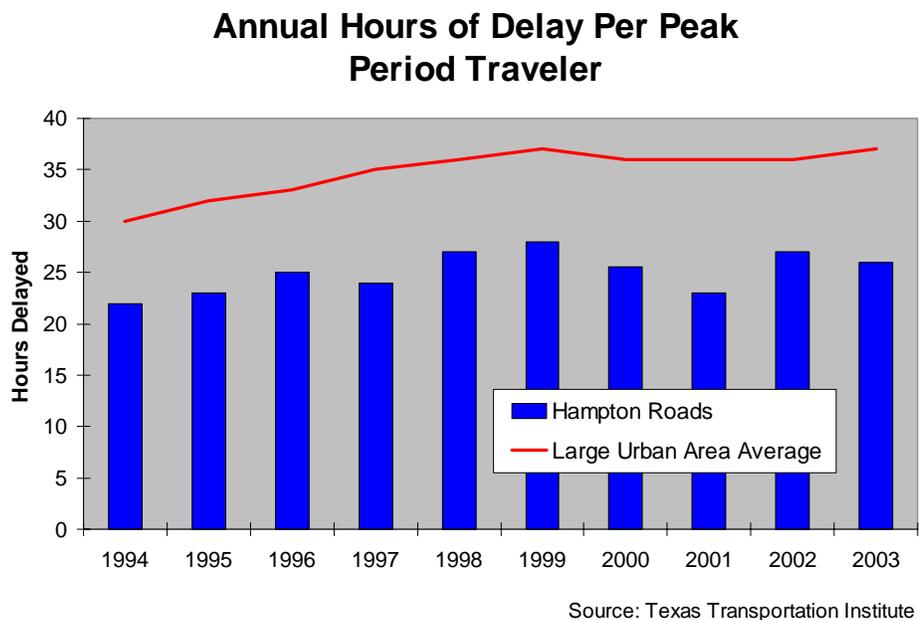

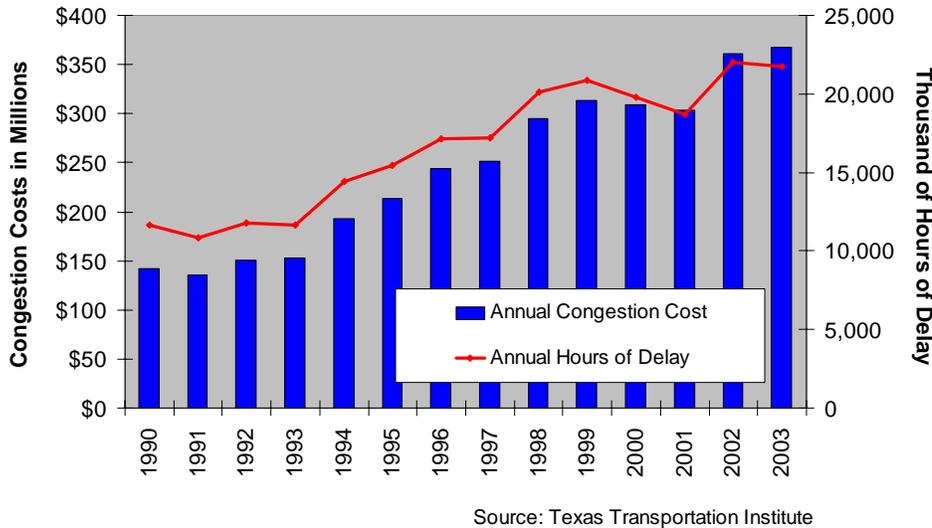

FIGURE 4.5 HAMPTON ROADS CONGESTION AND CONGESTION COSTS

Congestion and Congestion Costs

Why is it important:

Time spent in traffic comes at a cost for both residents and businesses. Increased congestion adds to the cost of doing businesses and decreases the quality of life.

How are we doing:

Congestion costs rose substantially through the nineties. In 2003 congestion costs in Hampton Roads reached \$367 million dollars. Continued congestion will inhibit the ability of the port to be competitive, restrict the flow of tourists, and reduce the quality of life for Hampton Roads residents.

FIGURE 4.6 HAMPTON ROADS TRAFFIC ACCIDENTS

Why is it important:

Today's society is very dependant on automotive transportation. As automobile use increases, so do traffic safety concerns.

How are we doing:

Traffic crash fatalities in Hampton Roads have averaged 141 per year over the past decade, roughly 8.8 deaths per 100,000 residents. The number of crashes has increased while the number of injuries has decreased. This apparent discrepancy is the result of improved safety standards for both roadways and automobiles, as well as reduced alcohol related crashes.

Traffic Crashes

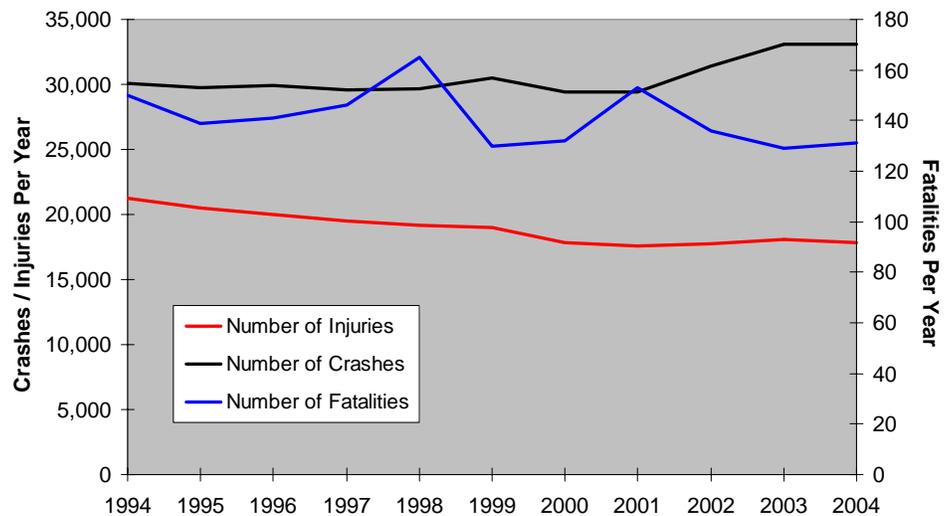

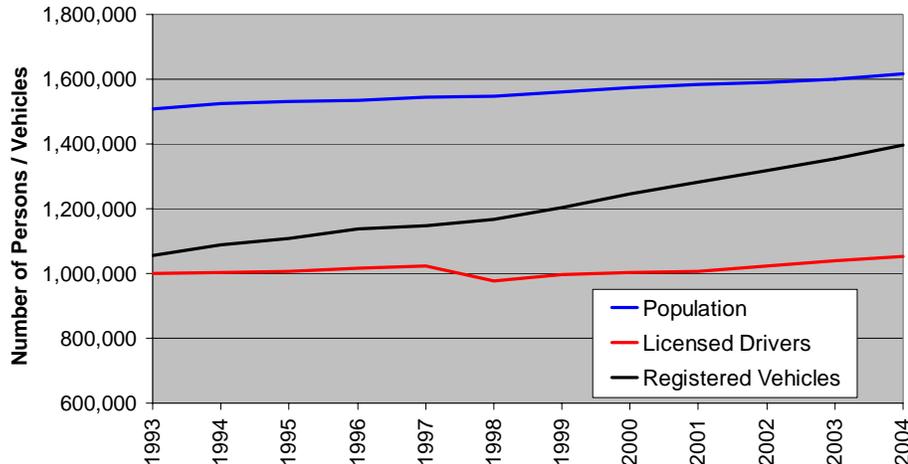

FIGURE 4.7 HAMPTON ROADS VEHICLE REGISTRATIONS

Population, Registered Vehicles, & Licensed Drivers in Hampton Roads

Source: Virginia Department of Motor Vehicles

Why is it important:

Population, the number of licensed drivers, and the availability of automobiles are all factors in determining automobile usage.

How are we doing:

As the Hampton Roads population increases, so do the number of licensed drivers. Precipitous growth in the number of registered vehicles has increased the availability of automobiles, subsequently increasing the number of vehicles on the road.

FIGURE 4.8 TRANSIT PASSENGER MILES IN HAMPTON ROADS

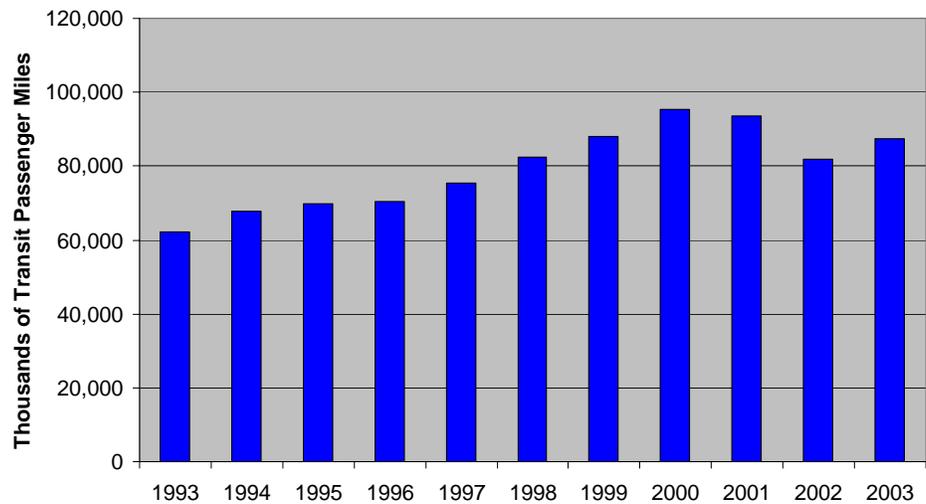

Why is it important:

Public transit provides persons with an alternate source of transportation. Transit can also help to alleviate roadway congestion. Transit ridership is typically a function of availability, necessity and opportunity.

How are we doing:

Transit passenger miles increased through the latter half of the nineties before falling in 2001 and 2002. Growth in regional transit has outpaced average transit growth nationwide.

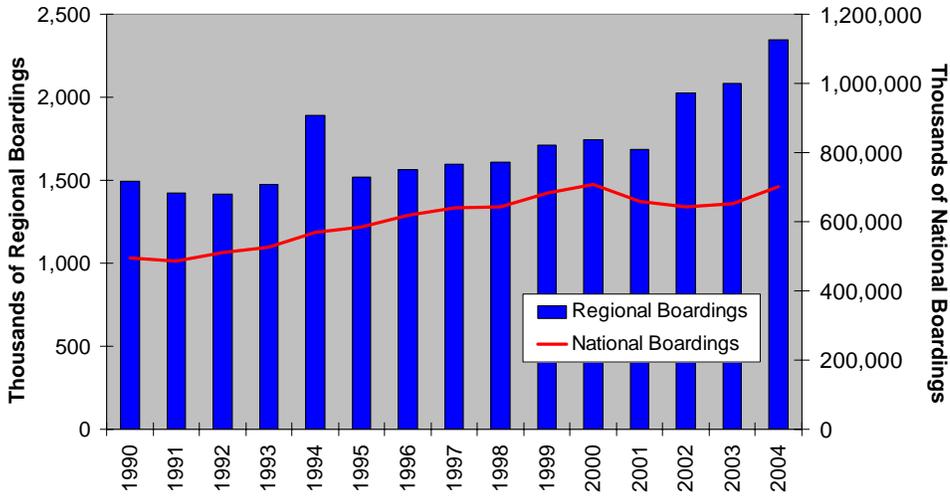

Transit Passenger Miles

Source: Federal Transit Administration

FIGURE 4.11 ENPLANEMENT TREND IN HAMPTON ROADS COMPARED TO THE NATIONAL ENPLANEMENT TREND

Local and National Boardings

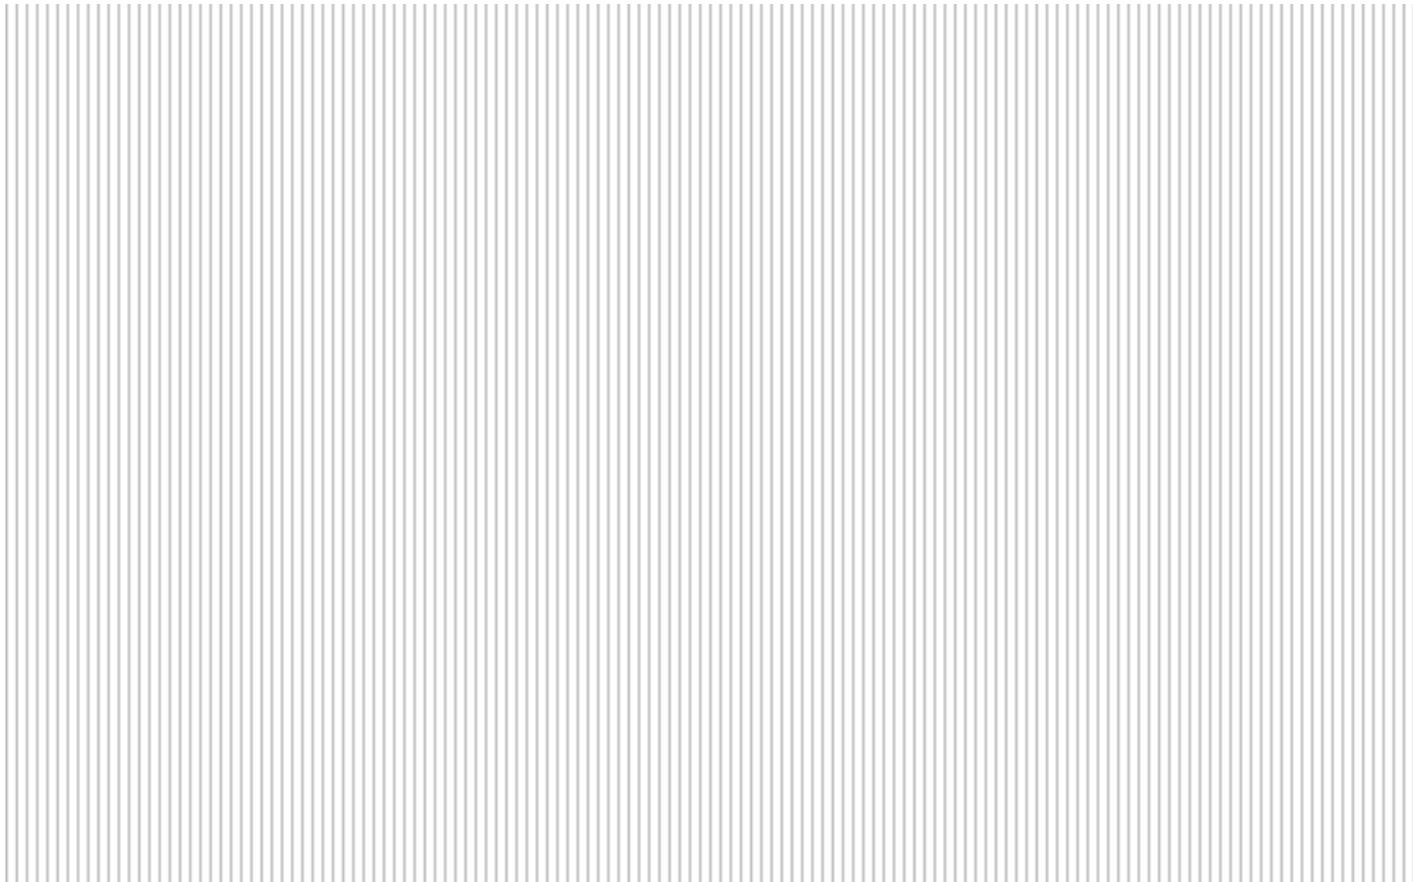

Source: Federal Aviation Administration

Why is it important:

The market for air travel is influenced by several factors including price and consumer confidence. Referencing national air travel trends provides a context with which to better understand regional travel.

How are we doing:

Following the events of September 11, the demand for air travel fell. The increased service of value-priced airlines has since boosted local air travel, as Hampton Roads residents are offered more travel options and lower fares.

THE ECONOMY

DEMOGRAPHICS

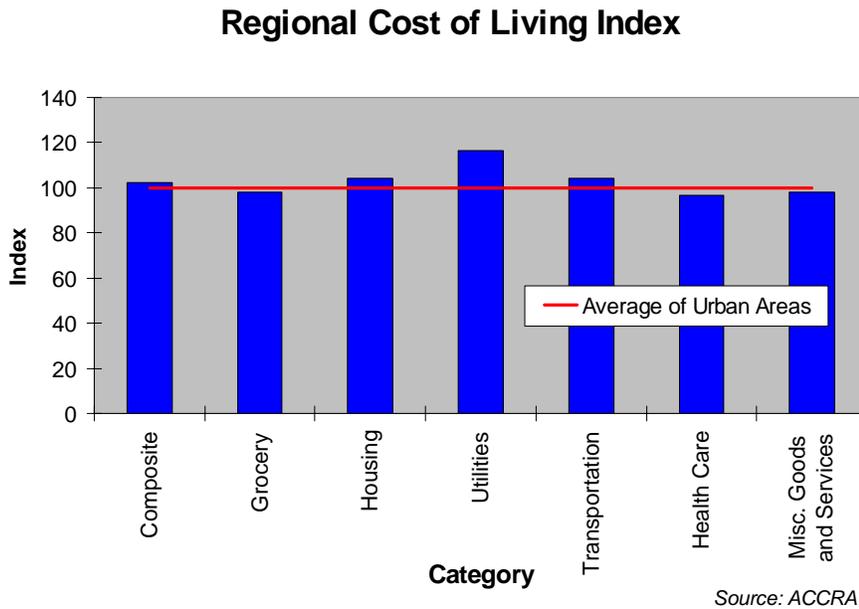

HOUSING

TRANSPORTATION

MISCELLANEOUS

This section of the report includes information on local government revenues and expenditures, education, crime, poverty, and the environment.

FIGURE 5.1 HAMPTON ROADS COST OF LIVING INDEX

Why is it important:

Variations in the cost of living are not constant across regions but vary by commodity from city to city.

How are we doing:

According to the most recent ACCRA survey, the composite cost of living in Hampton Roads was above the ACCRA survey average. Regional grocery and health care costs are below the index average while housing, utilities, and transportation are above average.

FIGURE 5.2 REVENUE SOURCES FOR LOCAL GOVERNMENTS IN HAMPTON ROADS

Why is it important:

Local governments generate revenues from a host of different sources. Virginia state law restricts the ability of local governments to tax, compelling localities to concentrate their efforts.

How are we doing:

The majority of Hampton Roads local government revenues are generated from real & personal taxes. Other local taxes, such as the BPOL tax and the utility tax, contribute significantly as well. The combined mix of revenue sources has led to a surge in local government revenue over the last two years.

Local Government Revenues

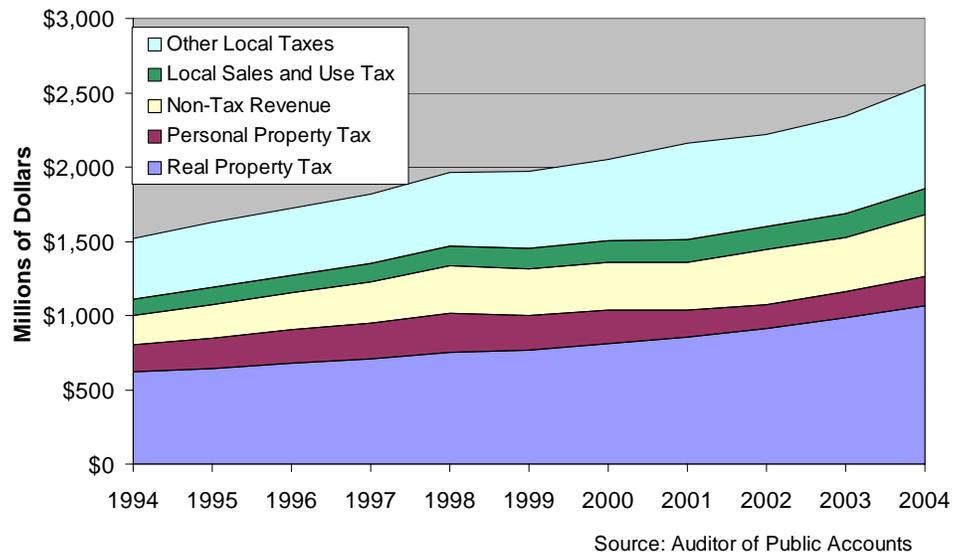

FIGURE 5.3 PROPERTY TAX COLLECTIONS IN HAMPTON ROADS

Why is it important:

The majority of local government revenues are generated from real and personal property tax collections. As a result local government expenditures are sensitive to variability in either category

How are we doing:

Property tax collections increased steadily through the nineties until the Personal Property Tax Relief Act cut personal property taxes. Property tax collections began increasing again when housing prices surged, driving up real estate taxes.

Property Tax Collections

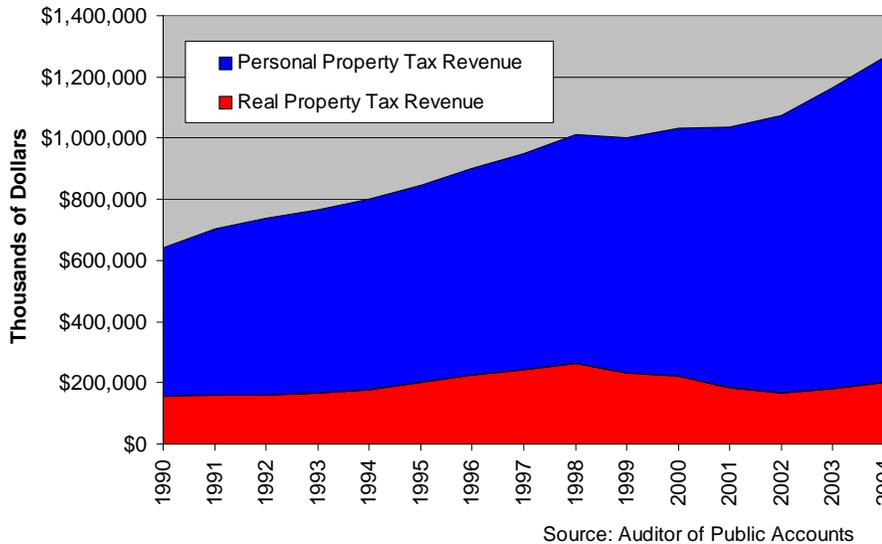

FIGURE 5.4 EXPENDITURE CATEGORIES FOR LOCAL GOVERNMENTS IN HAMPTON ROADS

Why is it important:

Local government provides a variety of services to their citizenry. The provision of services is based on state mandates and the demands from residents and businesses. Services are constrained by limited government revenues

How are we doing:

Over half of all local government expenditures in Hampton Roads are spent on education. Recent increases in revenue have enabled localities to increase funding for public works and other projects.

Local Government Expenditures

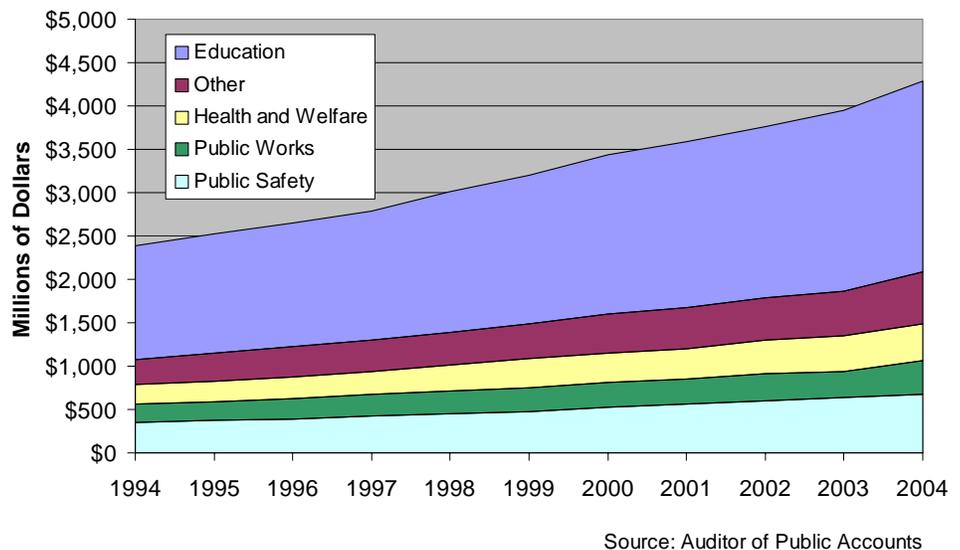

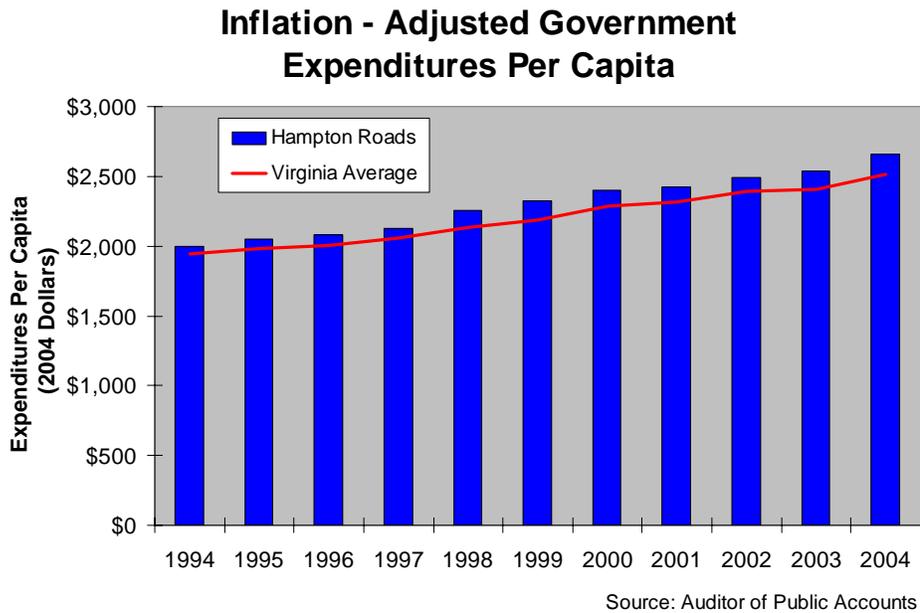

FIGURE 5.5 PER CAPITA LOCAL GOVERNMENT EXPENDITURES IN HAMPTON ROADS AND VIRGINIA

Why is it important:

Figure 5.5 illustrates the per-person cost of local government in Hampton Roads and across Virginia. As costs and requests for services increase, so do expenditures.

How are we doing:

Over the past decade, per person expenditures by local governments in Hampton Roads have exceeded the state average. Expenditures continue to increase as localities absorb an increasing share of education and other service costs.

FIGURE 5.6 DISTRIBUTION OF EDUCATION FINANCING FOR HAMPTON ROADS JURISDICTIONS IN 2004

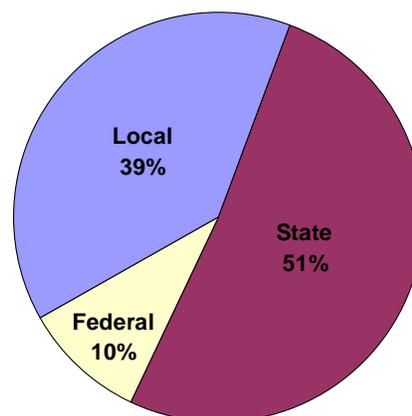

Why is it important:

The local, state, and federal governments share the financial burden of funding education. All three governments utilize unique revenue streams to raise the substantial capital required to pay for education.

How are we doing:

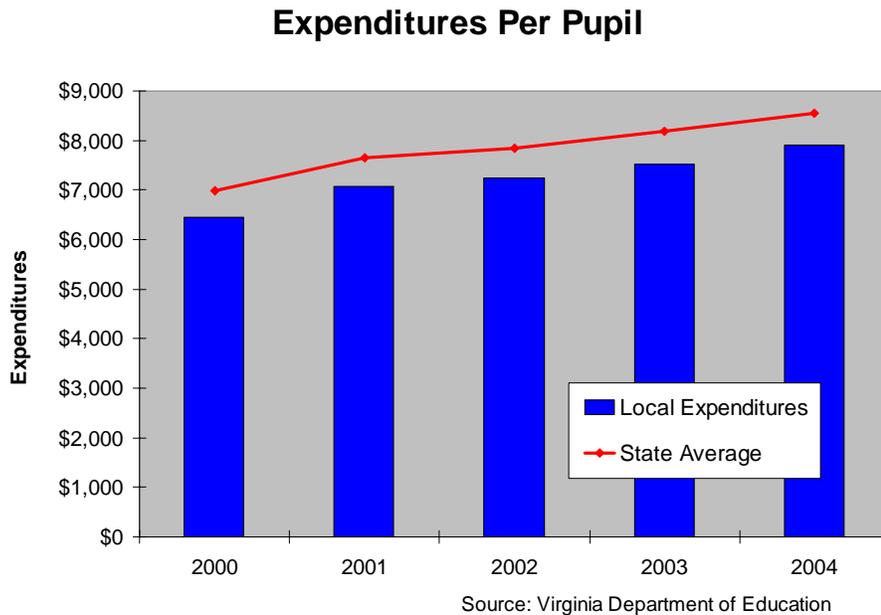

The distribution of education funding has remained constant over the past couple of years. All three governments have contributed to the increasing costs of education.

Sources of Education Financing

Source: Virginia Department of Education

FIGURE 5.7 EXPENDITURES PER PUPIL IN HAMPTON ROADS AND VIRGINIA

Why is it important:

Education expenditures reflect on the cost and priorities of the service area. Figure 5.7 illustrates how local expenditures compare to the state average.

How are we doing:

In 2004, per pupil education expenditures in Hampton Roads were 7.6% lower than the state average. Consistent increases in per pupil expenditures have been realized both at the local and state level.

FIGURE 5.8 GRADUATION RATES IN HAMPTON ROADS AND VIRGINIA

Why is it important:

Graduation rates are a reflection of a school system's ability to retain and educate students. High graduation rates contribute to a more educated work force and an increased quality of life.

How are we doing:

Graduation rates in Hampton Roads have consistently lagged behind the state average.

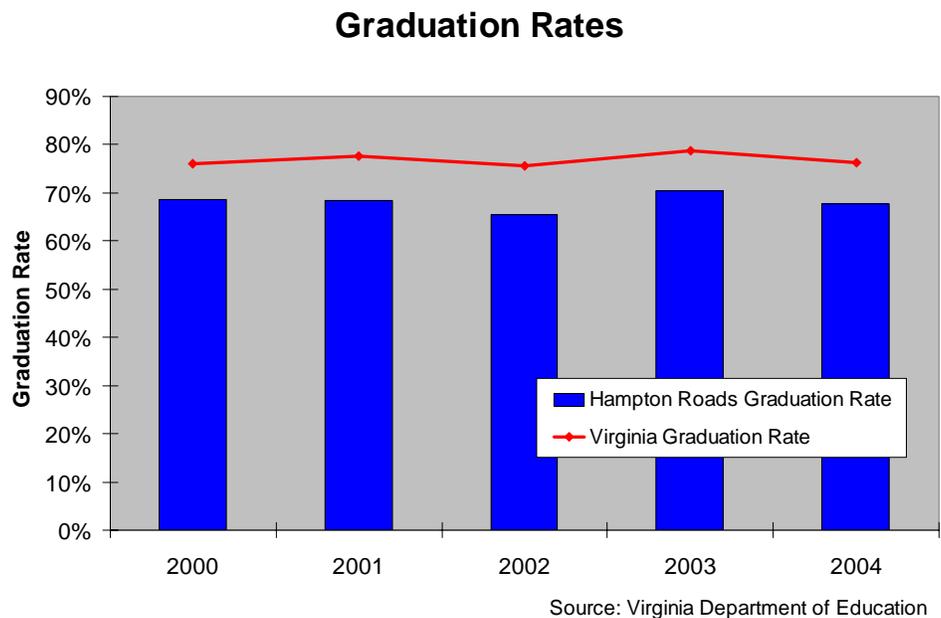

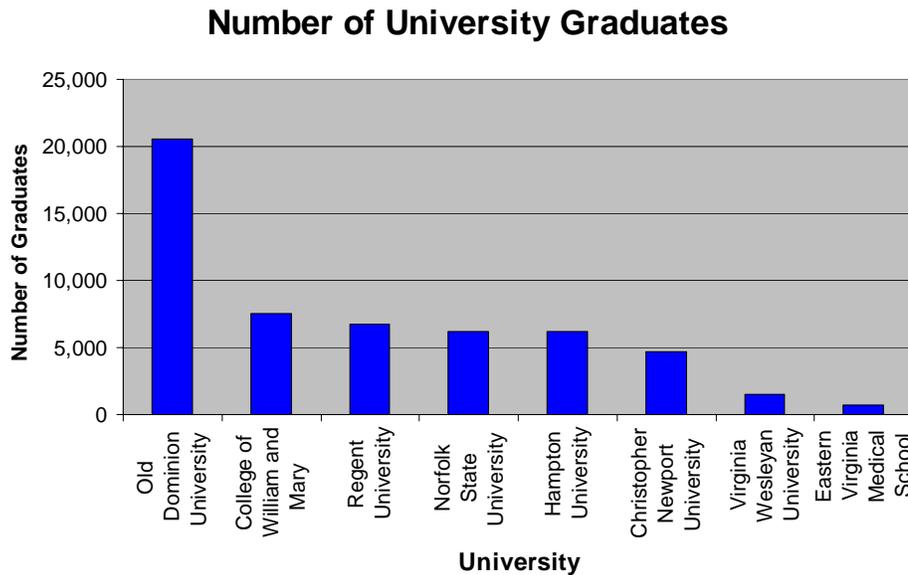

FIGURE 5.9 NUMBER OF GRADUATING STUDENTS FROM REGIONAL UNIVERSITIES IN 2005

Why is it important:

Institutions of higher learning provide the education and skills that are necessary for today's advanced workforce. Colleges and universities also tend to contribute to the business and entertainment community of their local environs, boosting the quality of life.

How are we doing:

Hampton Roads is host to numerous institutions of higher education. In 2005 there were 54,161 students enrolled in regional public and private colleges and universities.

Source: Council for Higher Education

FIGURE 5.10 VIOLENT CRIME IN HAMPTON ROADS

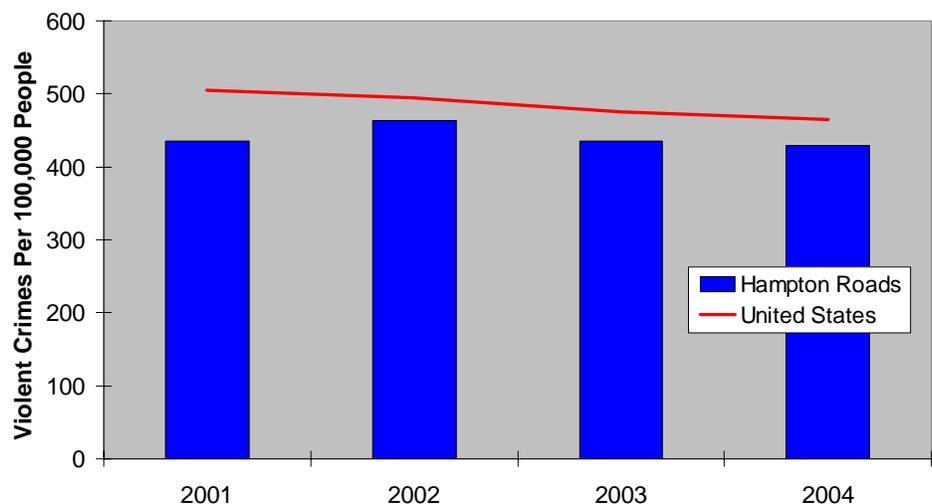

Why is it important:

Crime statistics reflect on social conditions and quality of life. Crime tends to increase during periods of social or economic turmoil.

How are we doing:

The rate of violent crime in Hampton Roads tends to be below the national average. In 2004, there were 429 violent crimes per 100,000 persons reported in Hampton Roads as opposed to the national average of 466.

Violent Crime

Source: Federal Bureau of Investigation

FIGURE 5.11 POVERTY RATES FOR HAMPTON ROADS AND THE UNITED STATES

Why is it important:

Impoverished persons lack the means to acquire adequate food, clothing, and shelter. Poverty rates are indicative of a region's ability to combat the social and economic conditions that result in poverty.

How are we doing:

Poverty rates in Hampton Roads tend to follow the national trend. The region's poverty rate has been below the national average since 1997

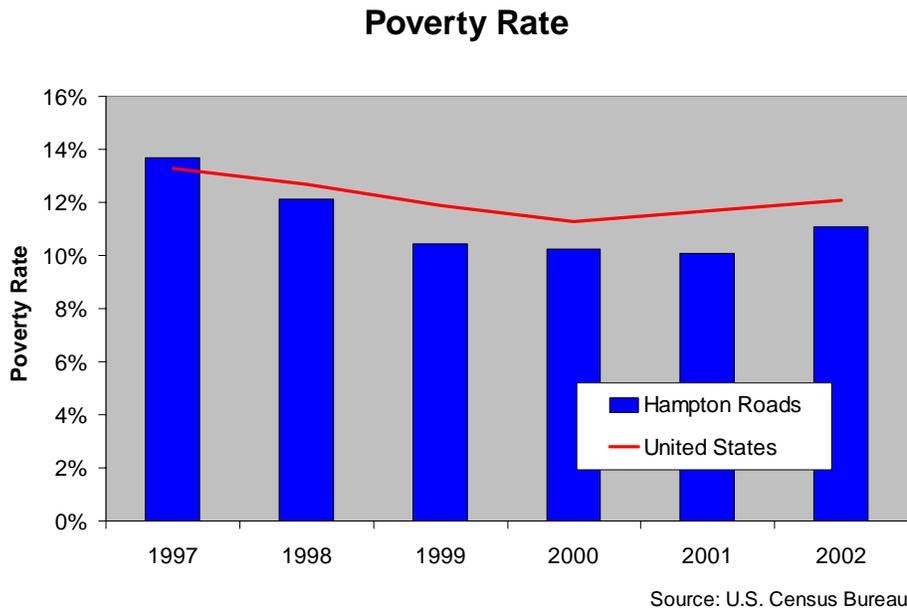

FIGURE 5.12 HAMPTON ROADS AIR QUALITY IN 2004

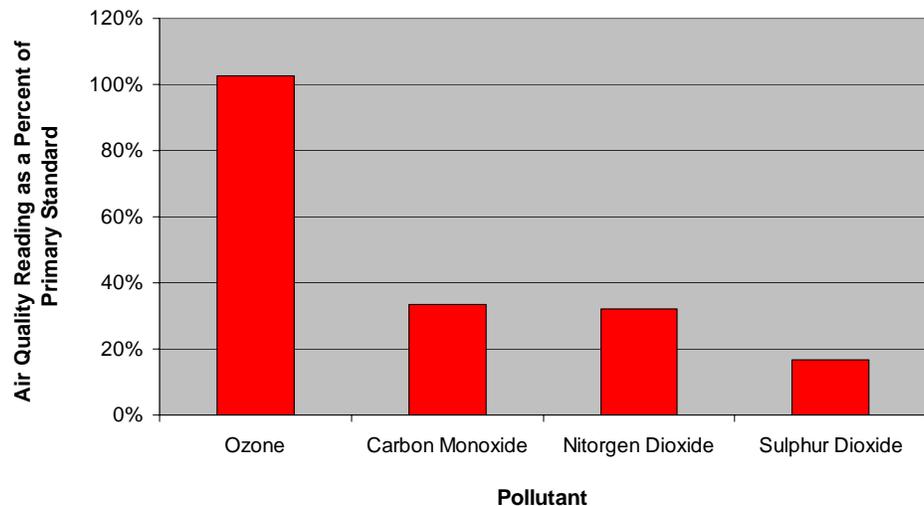

Why is it important:

The Environmental Protection Agency and the Virginia Department of Environmental Quality (DEQ) monitor air quality to protect the health and welfare of the people.

How are we doing:

Of the four pollutants monitored by Virginia's DEQ, only ozone surpasses the primary standard as set by the United States government.

Air Quality

Source: Virginia Department of Environmental Quality

FIGURE 5.13 OZONE LEVELS IN HAMPTON ROADS COMPARED TO THE PRIMARY STANDARD

Why is it important:

According to the National Institute of Environmental Health Sciences, short-term exposure to ambient ozone can have serious health implications.

How are we doing:

Hampton Roads has exceeded the primary ozone standard every year for the past eight years. Steps have been taken to reduce both point and non-point source pollutants.

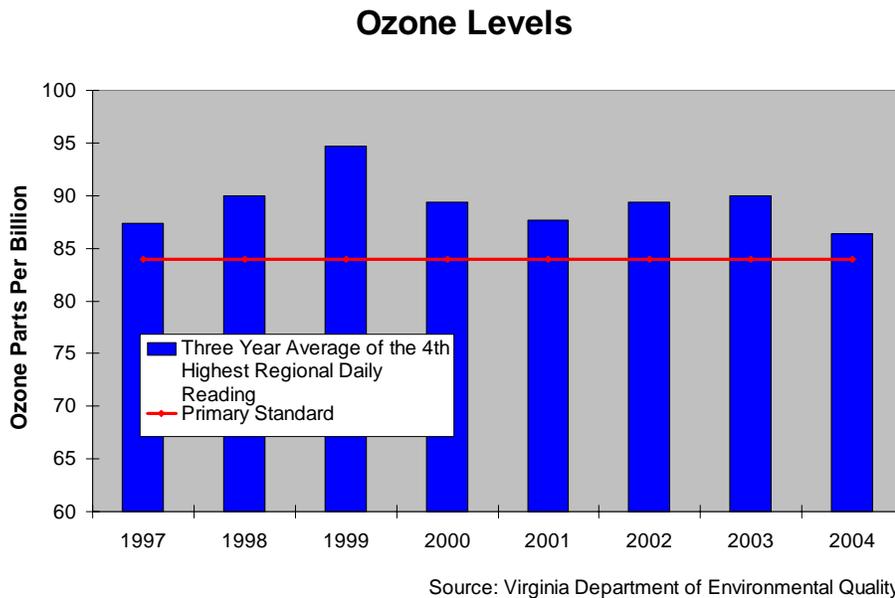

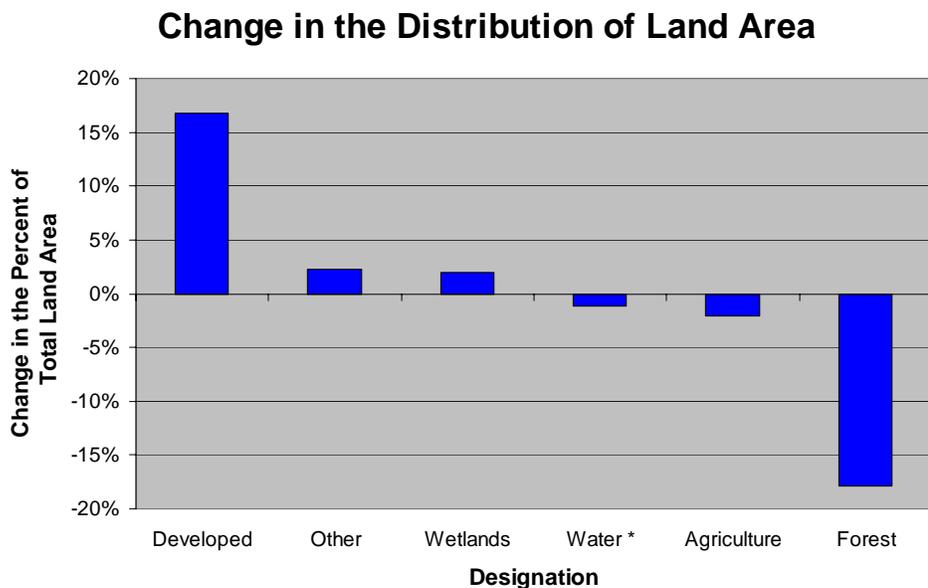

FIGURE 5.14 LAND USE CHANGE IN HAMPTON ROADS FROM 1992 TO 2001

Why is it important:

Land use decisions impact on health, traffic, and quality of life. The majority of urban centers continuously develop greenspace in order to meet the ever-increasing demands for real estate.

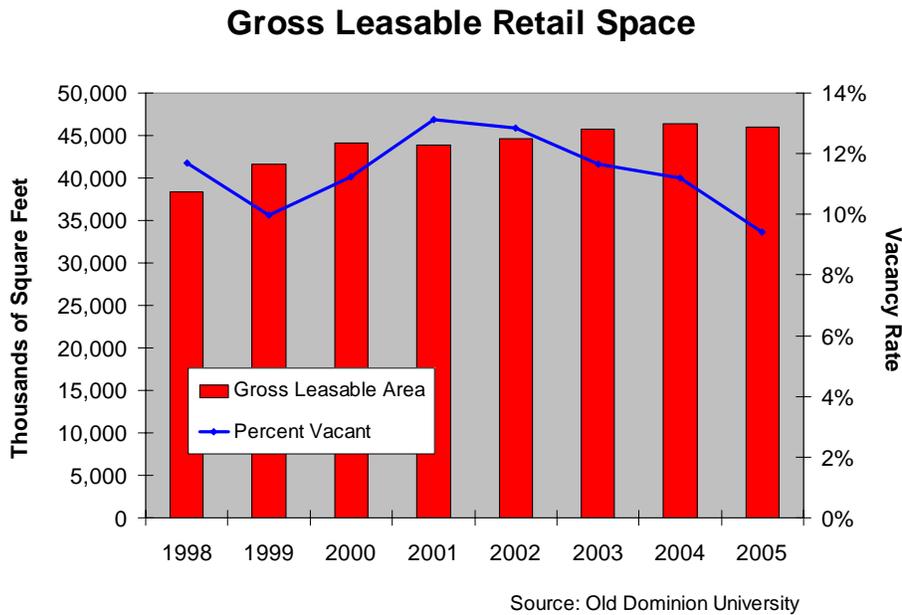

How are we doing:

Jurisdictions throughout Hampton Roads followed the national trend of converting undeveloped land. Since 1992, the distribution of forests in Hampton Roads has been reduced by 18%. Conversely, the distribution of developed land has increased by 17%.

* Does not include James R., York R., or Chesapeake Bay

FIGURE 5.15 GROSS LEASABLE RETAIL SPACE IN HAMPTON ROADS

Why is it important:
The availability of retail space reflects market conditions, speculation, and access to real estate.

How are we doing:
Regional gross leasable retail space has remained relatively constant since 2000. New and expanding retail establishments have decreased the vacancy rate from 13.1% in 2001 to 9.4% in 2005.

FIGURE 5.16 HAMPTON ROADS INDUSTRIAL MARKET VACANCY RATE

Why is it important:

The industrial market vacancy rate signals the availability of industrial space for area employers. Sudden large changes in the vacancy rate can indicate the arrival or departure of a major employer. Continuous marginal changes are indicative of trends in the industrial market.

How are we doing:

Industrial vacancy rates decreased over the latter half of the nineties when the market absorbed the available stock of industrial space. At present the industrial market is in a healthy and stable condition.

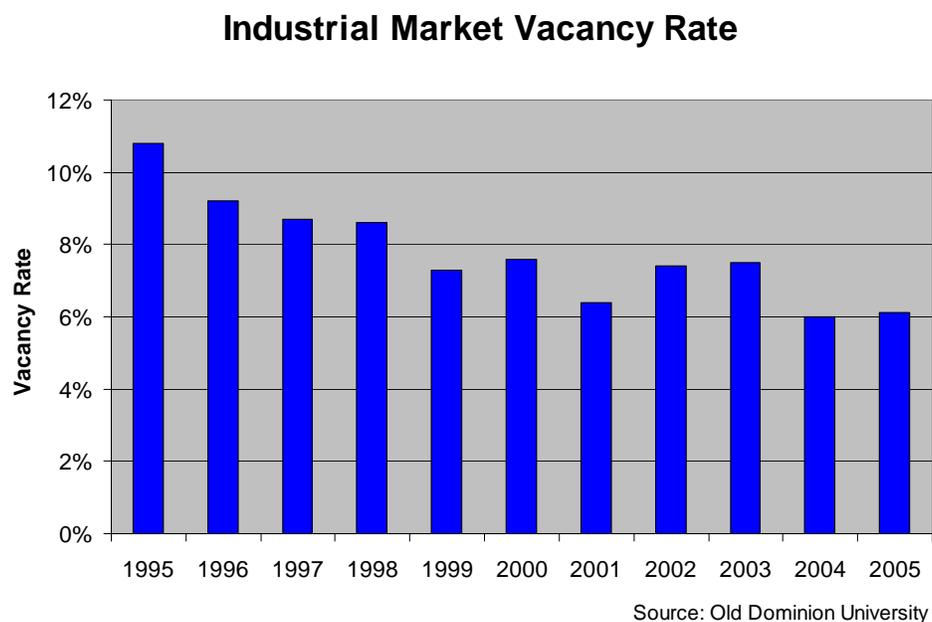

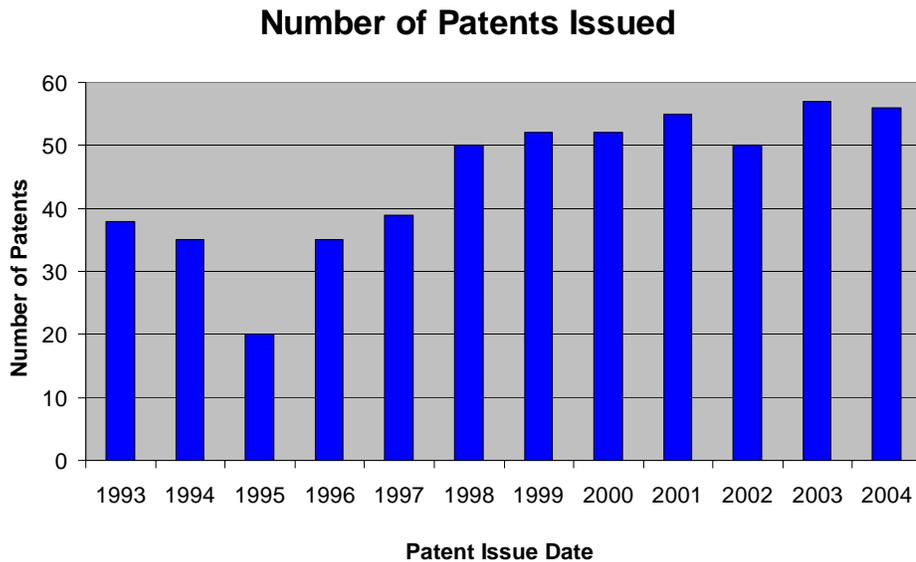

FIGURE 5.17 NUMBER OF PATENTS ISSUED IN HAMPTON ROADS

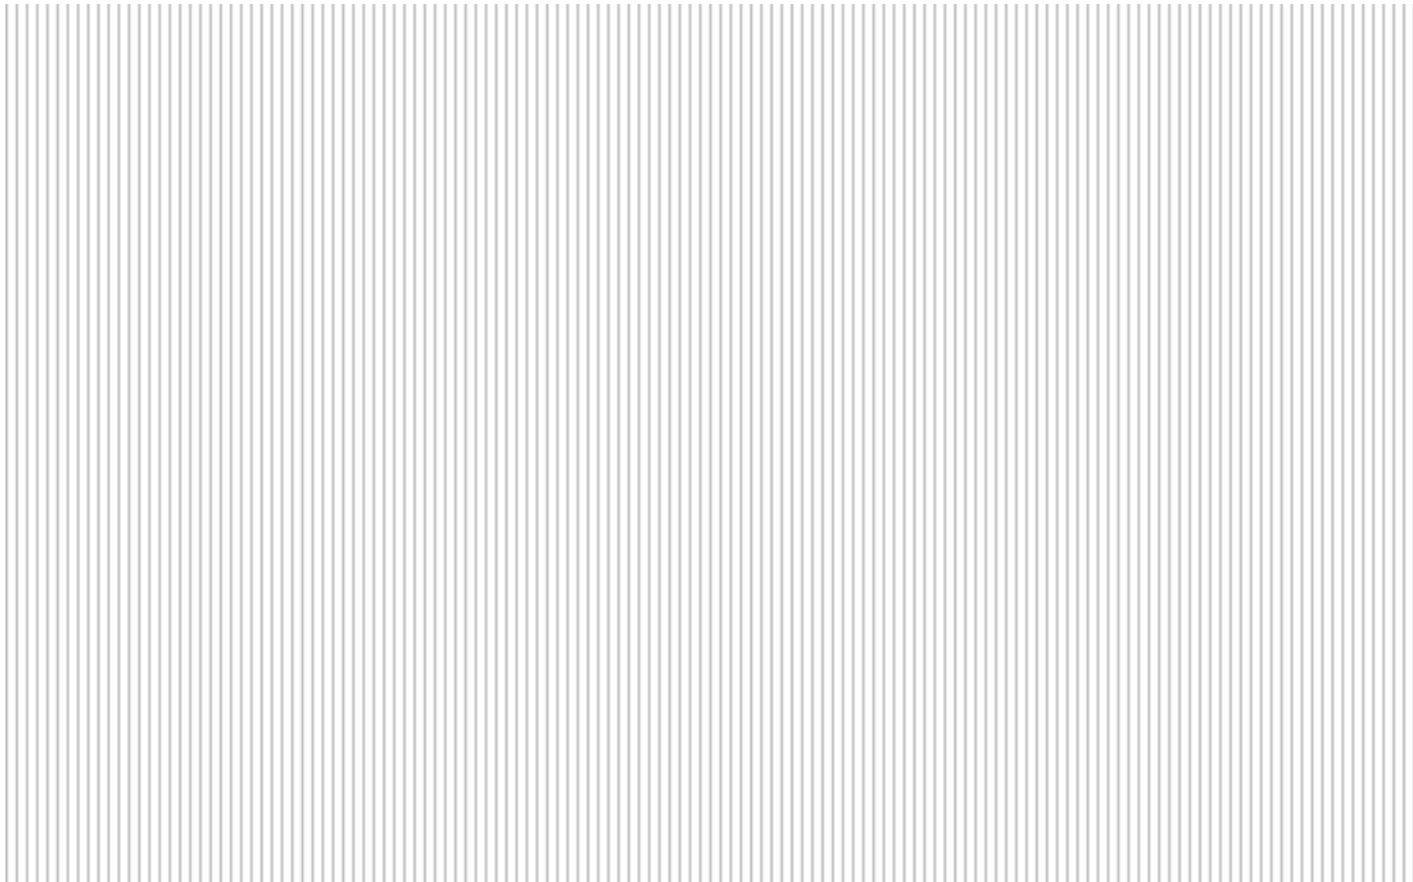

Source: United States Patent and Trademark Office

Why is it important:

The number of patents reflects on the pace of innovation and the entrepreneurial spirit in a community. Entrepreneurs spawn new businesses, which, in turn, contribute to economic growth.

How are we doing:

The level of patenting in Hampton Roads is low compared to other metro areas, suggesting limited entrepreneurial activity. Regional economic development initiatives targeting entrepreneurs might spur business development and increase the number of new businesses.
