ABSTRACT

The HRTPO has released the *Average Weekday Traffic Volumes for Major Roadways in Hampton Roads* report on an annual basis since 2006. This document continues that effort by detailing regional traffic volumes for the years 2007-2012. In addition, this report now includes for the first time speed data collected by INRIX. It also includes congestion levels based on the above volumes and speeds.

This report is produced as part of the region's Congestion Management Process (CMP). The Congestion Management Process is an on-going process that identifies, develops, evaluates, and implements transportation strategies to enhance mobility regionwide.

NON-DISCRIMINATION

The HRTPO assures that no person shall, on the ground of race, color, national origin, handicap, sex, age, or income status as provided by Title VI of the Civil Rights Act of 1964 and subsequent authorities, be excluded from participation in, be denied the benefits of, or be otherwise subject to discrimination under any program or activity. The HRTPO Title VI Plan provides this assurance, information about HRTPO responsibilities, and a Discrimination Complaint Form.

ACKNOWLEDGMENTS

This document was prepared by the Hampton Roads Transportation Planning Organization (HRTPO) in cooperation with the U.S. Department of Transportation (USDOT), Federal Highway Administration (FHWA), Federal Transit Administration (FTA), Virginia Department of Transportation (VDOT), Virginia Department of Rail and Public Transportation (DRPT), Transportation District Commission of Hampton Roads (TDCHR), and Williamsburg Area Transit Authority (WATA). The contents of this report reflect the views of the HRTPO. The HRTPO staff is responsible for the facts and the accuracy of the data presented herein. The contents do not necessarily reflect the official views or policies of the FHWA, FTA, VDOT or DRPT. This report does not constitute a standard, specification, or regulation. FHWA, FTA, VDOT or DRPT acceptance of this report as evidence of fulfillment of the objectives of this program does not constitute endorsement/approval of the need for any recommended improvements nor does it constitute approval of their location and design or a commitment to fund any such improvements. Additional project level environmental impact assessments and/or studies of alternatives may be necessary.

INTRODUCTION

The HRTPO has released the *Average Weekday Traffic Volumes for Major Roadways in Hampton Roads* report on an annual basis since 2006. This document continues that effort by detailing regional traffic volumes for the years 2007-2012.

The traffic volume data included in this document is collected from a variety of sources, including the Virginia Department of Transportation (VDOT), the regional bridge and tunnel facilities, and tolled facilities. Data is also included from those localities in Hampton Roads that maintain their own traffic count programs, including Hampton, Newport News, and Virginia Beach.

In addition to traffic volume data, this report includes speed data collected by INRIX for the first time. INRIX collects this data using millions of probe vehicles, including taxis, delivery vans, fleet vehicles, trucks, and smartphone users. The speed data included in this report represents hourly weekday data averaged over the entire year 2012 broken down by direction. Peak hour congestion data and maps are also included in this report, based on the speed and traffic volume data.

This report is produced as part of the region’s Congestion Management Process (CMP). The Congestion Management Process is an on-going process that identifies, develops, evaluates, and implements transportation strategies to enhance mobility regionwide. As such, this document includes those roadways that comprise the Hampton Roads Congestion Management Process network. This network includes all roadways classified by VDOT as minor arterials, principal arterials, expressways, freeways, or interstates, as well as selected collectors. More information about the Hampton Roads Congestion Management Process is available on the Hampton Roads Transportation Planning Organization's website at <http://www.hrtpo.org/page/congestion-management>.

LEGEND - TRAFFIC VOLUME, SPEED, AND CONGESTION DATA TABLES

JURIS NAME

Includes the names of each jurisdiction as shown below:

CHES – Chesapeake
FR – Franklin
GLO – Gloucester County
HAM – Hampton
IW – Isle of Wight County
JCC – James City County
NN – Newport News
NOR – Norfolk
POQ – Poquoson
PORT – Portsmouth
SH – Southampton County
SUF – Suffolk
SUR – Surry County
VB – Virginia Beach
WMB – Williamsburg
YC – York County

COUNT DATE & SOURCE

This column shows the source for each traffic count, and the dates that the count was taken.

For those counts showing “Wkdy average” as the count date, traffic volumes are collected continuously throughout the year and the weekday (Tuesday-Thursday) average is shown.

The following codes are used to represent each count source:

C – City/county
E – Estimate
O – Other
T – Tunnel or toll facility
V – VDOT

SPEED

Speed data is collected by INRIX on many roadways in Hampton Roads. The yearly average speeds are calculated by direction for each of the four hours in the morning (AM) peak period (5-9 am) and the afternoon (PM) peak period (3-7 pm). These speeds represent an average of weekdays (Tuesdays-Thursdays) throughout 2012.

This column shows the lowest of the four hourly average speeds that occur in each direction in each peak period.

A “-” indicates that INRIX speed data is not available for that segment.

TRAVEL TIME INDEX (TTI)

The travel time index is calculated by INRIX for each roadway segment where speed data is collected. The TTI represents the ratio of travel time in the peak hour to travel time in free-flow conditions. A TTI of 1.20 means a 20-minute free flow trip takes 24 minutes in the peak hour.

The yearly average travel time index is calculated for each of the four hours in the AM and PM peak period. This column shows the highest of these four TTIs that occur in each direction. It occurs during the same hour as the speed shown in the previous column.

A “-” indicates that travel time index data is not available for that segment.

CONGESTION LEVEL

Congestion levels are shown in these columns for the AM and PM peak hour. Congestion levels are based on the travel time index when speed data is available, or Highway Capacity Manual (HCM) level of service (LOS) methods for roadways without speed data.

Congestion levels for roadways **with** speed data are shown based on the table below:

Congestion Level		Freeway	Arterial
Low	LOW	TTI < 1.15	TTI < 1.25
Moderate	MOD	1.15 ≤ TTI < 1.3	1.25 ≤ TTI < 1.4
Severe	SEV	TTI ≥ 1.3	TTI ≥ 1.4

Congestion levels for roadways **without** speed data are shown based on the table below:

Congestion Level		HCM LOS
Low	LOW	A-C
Moderate	MOD	D
Severe	SEV	E-F
