

EPA Beach Monitoring and Notification Grant Predictive Modeling Study

- VDH Waterborne Hazards Program & Virginia Institute of Marine Science invited to present results at 11-2-16 Joint Meeting of DUC and Health Directors
- Collect and analyze water quality, weather, and environmental data from 10 Norfolk beaches and 5 Newport News beaches
- Determine if relationships between bacterial levels and environmental variables exist, and if a model that is predictive of enterococci exceedances of the WQS can be established.
